

List of Course Hand-outs (Odd and Even Semester)

Department of Mechatronics Engineering SAMM

Manipal University Jaipur (RJ)

# School of Automobile, Mechanical, Mechatronics Department of Mechatronics Engineering

### Vision, Mission and PEOs of the Department

### Vision

Global excellence in Mechatronics domain to provide innovative solution for industrial advancements and societal challenges.

### Mission

- ♣ Provide outcome-based learning to fulfil industrial needs by nurturing inter-disciplinary knowledge for enhancing academic and professional excellence.
- ♣ Impart value-based education with state-of-the-art academic environment, humanistic values, and peer teaching-learning approach for enhancing employability and entrepreneurship skills.
- Lincourage inter-disciplinary approach to foster research and innovative ideas for smart Mechatronics system by experiential learning.
- 4 Provide opportunity to exhibit and enhance lifelong learning skills with ethical values and social relevance.

### Program Educational Objectives

- **PEO-1:** To understand, analyse, design, and develop the mechatronics system using modern tools and technologies to meet the industrial needs.
- **PEO-2:** Prepare graduates to pursue higher studies by enhancing analytical and problem-solving skills in inter-disciplinary engineering for research and innovation.
- **PEO-3:** Graduates of the programme will exhibit life-long learning skills, entrepreneurship competencies and ethical values for a successful professional career and societal needs.

### PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

### PROGRAM OUTCOMES

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- [PO.2]. Problem analysis: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
  - [PO.4]. Conduct investigations of complex problems: Use research- based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern engineering</u> and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <a href="impact of the">impact of the</a> professional <a href="engineering solutions in societal and environmental contexts">engineering solutions in societal and environmental contexts</a>, and demonstrate the knowledge of, and need for sustainable development

  [PO.8]. Ethics: Apply ethical principles and commit to <a href="professional ethics">professional ethics</a> and responsibilities and norms of the engineering practices
  - **[PO.9]. Individual and teamwork**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12].Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long</u> learning in the broadest context of technological change
- **[PSO.1]** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.

[PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

DEPARTMENT OF Mechatronics ENGINEERING
Department of Mathematics and Statistics
Course Hand-out

### Engineering Mathematics III | MA 1313 | 3 Credits

Session: July18-December 18 | Faculty: Dr. Laxmi Poonia

- **A. Introduction:** This course is offered by Dept. of Mathematics as core subject, targeting students who wish to pursue research& development in industries or higher studies in field of Engineering Mathematics. Offers in depth knowledge Laplace and fourier transform, Numerical analysis, Fourier series and vector calculus. Students are expected to have background knowledge on integration and differentiation for a better learning.
- **B.** Course Outcomes: At the end of the course, students will be able to
  - [1313.1] Analysis the problems of engineering by using Numerical analysis.
  - [1313.2] Solve the differential equations by using Laplace and Fourier transform.
  - [1313.3] Study the Flux and motion of fluid in the vector field.
  - [1313.4] Analysis and study the properties of periodic functions by Fourier series.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.6]. The engineer and society**: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal and</u> environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions

- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### D. Assessment Plan:

Criteria	Description	Maximum Marks				
	Sessional Exam I (Close Book)	15				
Internal Assessment	Sessional Exam II (Close Book)	15				
(Summative)	In class Quizzes and Assignments,	30				
	Activity feedbacks (Accumulated and					
	Averaged)					
End Term Exam	End Term Exam (Close Book)	40				
(Summative)						
	Total	100				
Attendance	A minimum of 75% Attendance is required to be maintained by a student to be					
(Formative)	qualified for taking up the End Semester examination. The allowance of 25%					
	includes all types of leaves including med					
Make up Assignments		report to the teacher about the absence. A				
(Formative)		n the day of absence will be given which				
	has to be submitted within a week from the					
	given on this. The attendance for that partic					
	so that the student is not accounted for ab	_				
	maximum of 5 throughout the entire seme					
Homework/ Home Assignment/	I	have to work in home, especially before a				
Activity Assignment	flipped classroom. Although these works are not graded with marks. However, a					
(Formative)	student is expected to participate and perform these assignments with full zeal since					
		on by a student will be assessed and marks				
	will be awarded.					

### E. SYLLABUS

**Vector Calculus**: gradient, divergence and curl, vector integrals, related theorems, **Laplace Transforms**: Transforms of elementary functions, inverse transforms, convolution theorem. Application of Laplace in solutions of differential equations with constant coefficients.

Fourier series: Fourier series, Dirichlet's, even and odd functions, half range series, change of interval, harmonic analysis.

**Fourier Transforms:** Fourier integrals, Complex Fourier transform, Fourier sine and cosine transforms, solution of heat and wave equations.

**Finite Differences and Interpolation:** Finite difference operators, Newton's forward and forward interpolation formula, Lagrange's and Stirling interpolation formula. Numerical differentiation and integration.

### **Text Books:**

- 1. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, Delhi, 2006.
- 2. Srimanta Pal, Subhdh C. Bhunia, "Engineering Mathematics", Oxford University Press, 2015.
- 3. H. K. Das, "Advanced Engineering Mathematics" S. Chand, 2015.

### **References:**

- 1. Erwin Kreyszig, "Advanced Engineering Mathematics", Wiley India Eastern, 2006.
- 2. B. V. Ramana, Higher Engineering Mathematics, Tata McGraw Hill Education Private Limited, New Delhi 2007.

### F. Lecture Plan:

<b>Description of the Topics</b>	Required Lectures	<b>Cumulated Lectures</b>
Laplace Transform:		
Definition of LT. LT of elementary functions, Sectionally Continuous and Exponential order, Existence theorem	1	1
Properties of LT: linearity, First shifting, second shifting, change of scale, Multiplication by t, division by t, Derivative property, Integral Prop.,Initial Value Problem, Final Value Problem (Without Proof)	3	4
Inverse transforms, convolution theorem.	2	6
Application of Laplace in solutions of differential equations with constant coefficients.	1	7
Finite Differences and Interpolation		
Finite difference operators	1	8
Newton's- Gregory forward and backword interpolation formula,	2	10
Stirling interpolation & Lagrange's	2	12
Numerical Differentiation (For Forward, Backward, Stirling)	2	14
Numerical Integration( Quadrature formula, Trapezoidal rule, Simpson 1/3rule, Simpson's 3/8 rule, Weddle rule	3	17
Vector Calculus:		
gradient, divergence and curl	3	20
vector integrals	3	23
Greens, Stokes and Gauss Divergence theorem	4	27
Fourier series:		
Fourier series, Dirichlet Condition	2	29
even and odd functions half range series	1	30
change of interval	2	32
Harmonic analysis	2	34
Fourier Transforms:		
Fourier integrals	1	35
Complex Fourier transform, Fourier sine and cosine transforms,	2	37

Properties of Fourier Transform	2	39
solution of heat and wave equations	3	42

School of Automobile Mechanical and Mechatronics Engineering

### Department of Mechatronics Engineering Course Hand-out

Strength of Materials | MC1306 | 4 Credits | 4 0 0 4

Session: July 18 – Dec 18 | Faculty: Hemant Kumar | Class: Departmental Core

**A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as departmental core. Strength of Materials is a fundamental subject needed primarily for the students of Mechanical sciences. As the engineering design of different components, structures etc. used in practice are done using different kinds of materials, it is essential to understand the basic behaviour of such materials. The objective of the present course is to make the students acquainted with the concept of load resultant, consequences and how different kinds of loadings can be withstood by different kinds of members with some specific materials.

**B. COURSE OUTCOMES:** At the end of the course, students will be able to

[MC1306.1] Predict the changes in the mechanical behaviour of materials due to the forces applied on physical models [MC1306.2] Interpret and quantitatively determine standard mechanical properties from stress-strain diagram.

[MC1306.3] Recognize the fundamental concepts of mechanics of deformable solids; including static equilibrium, geometry of deformation, and material constitutive behaviour.

[MC1306.4] Create interest to explore the analysis and design of engineering structure considering factors of deflection, buckling, and combined loading and failure theories.

[MC1306.5] To build the necessary theoretical background for further structural analysis and design courses.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

[PO.1].Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems

[PO.2].Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

[PO.3].Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

[PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice

- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.10].Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### D. Assessment Rubrics:

Criteria	Description	Maximum Marks				
	Sessional Exam I (Closed Book)	15				
Internal Assessment	Sessional Exam II (Closed Book)	15				
(Summative)	In class Quizzes and Assignments,	30				
	Activity feedbacks (Accumulated and Averaged)					
End Term Exam (Summative)	End Term Exam (Close Book)	40				
	Total	100				
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be					
	qualified for taking up the End Semester examination. The allowance of 25%					
	includes all types of leaves including m	nedical leaves.				
Make up Assignments (Formative)	Students who misses a class will have t	o report to the teacher about the				
	absence. A makeup assignment on the	copic taught on the day of absence will				
	be given which has to be submitted wit	hin a week from the date of absence.				
	No extensions will be given on this. Th	e attendance for that particular day of				
	absence will be marked blank, so that the	he student is not accounted for absence.				
	These assignments are limited to a max	imum of 5 throughout the entire				
	semester.					
Homework/ Home Assignment/	There are situations where a student ma	ny have to work in home. Although				
Activity Assignment (Formative)	these works are not graded with marks. However, a student is expected to					
	participate and perform these assignments with full zeal since the activity					
	classroom participation by a student will be assessed and marks will be					
	awarded.					

### E. SYLLABUS:

Stress, Strain and Deformation of Solids: Rigid and Deformable bodies, Strength, Stiffness and Stability, Stresses; Tensile, Compressive and Shear, Deformation of simple and compound bars under axial load, Thermal stress, Elastic constants, Strain energy and unit strain energy, Strain energy in uniaxial loads, Beams-Loads and Stresses: Types of beams: Supports and Loads, Shear force and Bending Moment in beams, Cantilever, Simply supported and Overhanging beams, Stresses in beams, Theory of simple bending, Stress variation along the length and in the beam section, Effect of shape of beam section on stress induced, Shear stresses in beams, Shear flow, Torsion: Analysis of torsion of circular bars, Shear stress distribution, Bars of Solid and hollow circular section, Stepped shaft, Twist and torsion stiffness, Fixed and simply supported shafts, Beam deflection: Elastic curve of Neutral axis of the beam under normal loads, Evaluation of beam deflection and slope, Columns, End condition, Equivalent length of a column, Euler equation, Slenderness ratio, Rankine formula for columns, Analysis of stresses in two dimensions: Biaxial state of stresses, Thick & Thin cylindrical shells and spherical shells, Deformation in thick & thin cylindrical and spherical shells, Biaxial stresses at a point, Stresses on inclined plane, Principal planes and stresses, Mohr's circle for biaxial stresses, Maximum shear stress.

### Text Books:

# Department of Mechatronics Engineering Course Hand-out

Electronic Measurement and Instrumentation | MCI307 | 4 Credits | 4 0 0 4

Session: Jul 18 – Dec 18 | Faculty: Princy Randhawa | Class: Core Subject

**A. INTRODUCTION:** This course is electronics based course dealing with measurements and instrumentation designed for students in Physics Electronics, Electrical and Electronics Engineering and allied disciplines. It is a theory course based on the use of electrical and electronics instruments for measurements. The course deals with topics such as Principle of measurements, Errors, Accuracy, Units of measurements and electrical standards, , introduction to the design of electronic equipment's for temperature, pressure, level, flow measurement, resistance, speed etc.

**B.** COURSE OUTCOMES: At the end of the course, students will be able to

[MC1307.1] Measure various electrical parameters with accuracy, precision, resolution.

[MC1307.2] Explain the use of various electrical/electronic instruments, their construction, principles of operation, standards and units of measurements.: To Enhance entrepreneur ability skill

[MC1307.3] Explain the industrial and laboratory applications of Electrical/Electronic instruments.

[MC1307.4] Understand the concept of AC and DC bridges for the measurement of Resistance, Inductance and Capacitance.

[MC1307.5] Select appropriate passive or active transducers for measurement of physical phenomenon like temperature, pressure, flow, liquid level, displacement, speed etc.: To Enhance employability skill

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

**[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems

[PO.2].Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

[PO.3].Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

[PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

[PO.6].The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice

**[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10].Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **Assessment Rubrics:**

Criteria	Description	Maximum Marks							
	Sessional Exam I (Closed Book)	15							
Internal Assessment	Sessional Exam II (Closed Book)	15							
(Summative)	Tutorial	5							
	Seminar	10							
	Quiz	5							
	Project	10							
End Term Exam	End Term Exam (Closed Book)	40							
(Summative)									
	Total	100							
Attendance	A minimum of 75% Attendance is req	uired to be maintained by a student to							
(Formative)	be qualified for taking up the End Sei	mester examination. The allowance of							
	25% includes all types of leaves including medical leaves.								
Make up Assignments		Il have to report to the teacher about the							
(Formative)	absence. A makeup assignment on the	topic taught on the day of absence will							
	be given which has to be submitted w	ithin a week from the date of absence.							
	No extensions will be given on this. The	he attendance for that particular day of							
	absence will be marked blank, so the	hat the student is not accounted for							
	absence. These assignments are limited	ed to a maximum of 5 throughout the							
	entire semester.	_							
Homework/ Home Assignment/	There are situations where a student	may have to work in home. Although							
Activity Assignment	these works are not graded with marl	ks. However, a student is expected to							
(Formative)	participate and perform these assignment	nents with full zeal since the activity							
	classroom participation by a student	will be assessed and marks will be							
	awarded.								

### **SYLLABUS:**

Basic concepts of measurements: System configuration, calibration - Errors in measurements, measuring instruments: Permanent magnet moving coil, Moving iron, Electrodynamometer type and Rectifier type instruments, Applications - Measurement of Resistance, Inductance & Capacitance: A.C. Bridges. Temperature Measurement: Temperature and heat, Definitions, temperature scales, bimetallic thermometers, filled-bulb and glass stem thermometers, Resistance Temperature Detector (RTD), principle and types, measuring circuits, Linear and Quadratic approximation Thermistors, Thermocouples, optical pyrometers, Pressure Measurement: Manometers, Elastic types, Bell gauges, Electrical types, Differential Pressure transmitters, Dead weight Pressure gauges, Low Pressure Measurement: Mc Leod gauge, Knudsen gauge, Pirani gauge, Thermal conductivity gauges, Ionization gauge. Flow measurement: Classification of flow meters, orifice meters, Venturi Flow meter, variable area flow meters, Laser Doppler Anemometer (LDA), ultrasonic flow meters, Doppler flow meters, purge flow regulators, Measurement of mass flow rate: Radiation, angular momentum, Displacement measurement (LDR, Photodiode, LVDT), Vibration measurement, Level Measurement, Angular Velocity Measurement

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Analog System Design | MC1308 | 4 Credits | 3 | 0 4

Session: Aug 18 – Dec 18 | Faculty: Anil Sharma | Class: Department Core

- **H. Introduction:** This course is offered by Dept. of Mechatronics Engineering as third semester subject, targeting students who wish to pursue research & development in industries or higher studies in field of Mechatronics Engineering, including electronics system design and VLSI. This course will cover the basic building blocks of linear systems, such as inverting and non-inverting amplifiers, comparators, and filters.
- I. Course Outcomes: At the end of the course, students will be able to
  - [MC1308.1] Elucidate and design the linear and non-linear applications of an op-amp and special application IC's.
  - [MC1308.2] Apply the working principle of data converters and filters in practical applications.
  - [MC1308.3] Analyse the function of application specific ICs such as Voltage regulators, PLL and its application.
  - [MC1308.4] Assess the DC and AC characteristics of operational amplifiers and its effect on output and their compensation techniques.
  - [MC1308.5] Design waveform generation and PWM circuits using special application IC 555 and general purpose opamp for specific applications.

### J. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- [PO.13]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.14]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.15]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.16]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.17]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.18]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health,</u> <u>safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.19]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.20]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.21]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings

- [PO.22]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.23]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.24]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### N. Lecture Plan:

Lecture S.no.	Topics	Session Outcome	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
L1	Introduction, Basics Of Analog System Design	NA	Lecture	NA	NA
L2	Review Of Concepts - Amplifier Basics	To learn the basics of operational	Lecture	CO.1, CO.4	In class quiz
L3	Review Of Op-Amp Basics, Internal Block Diagram	amplifier IC, understand the working principle and pin diagram	Lecture	CO.1, CO.4	In class quiz
L4	Internal Block Diagram and Characteristics Of Ideal Op-Amp	of IC741	Lecture	CO.1, CO.4	Sessional Exam
L5	Characteristics Of Ideal Operational Amplifier And Signal Analysis		Lecture	CO.1, CO.4	End semester exam
L6	Frequency Response Analysis - Introduction		Lecture, Presentation	CO.1, CO.4	End semester exam
L7	Frequency Response Analysis Of Op- Amp	Learn the frequency properties of op-amp	Lecture, presentation	CO.4	Home assignment
L8	Numerical Questions Practice		Class activity	CO.4	End semester exam
L9	Linear Applications Of Op-Amp - Introduction	Implement the op-amps in various practical applications and learn their	Lecture	CO.4	Sessional Exam
L10	Linear Applications Of Op-Amp - Open Loop And Closed Loop Operation Of Operational Amplifier	uses.	Lecture, presentation	CO.1	Sessional Exam
L11	Inverting Amplifier, Non-Inverting Amplifier		Lecture	CO.1	In class quiz
L12	Different Configurations Of Op-Amp		Lecture, presentation	CO.1	In class quiz
L13	Different Configurations Of Op-Amp		Presentation	CO.2, CO.4	End semester exam
L14	Numerical questions practice		Class activity	CO.2, CO.4	Sessional Exam
L15	Non-Linear Applications Of Operational Amplifier - Introduction	Explore the different non-linear applications of op-amp and their	Lecture, presentation	CO.2, CO.1	In class quiz
L16	Precision Half Wave And Full Wave Rectifiers	implementation	Lecture, presentation	CO.2, CO.1	Home assignment
L17	Peak Detector, Sample And Hold Circuit	Design op-amp circuits for non- linear applications	Presentation	CO.2, CO.1	Home assignment
L18	Sample And Hold Circuit, Log And Antilog Amplifiers		Presentation	CO.2, CO.1	In class quiz
L19	Log And Antilog Amplifiers, Analog Multipliers And Dividers		Presentation	CO.1	In class quiz

L20	Non-Linear Applications – Comparators, Window Detector		Lecture, Class activity	CO.1	In class quiz
L21	Non-Linear Applications - Schmitt Trigger		Lecture, Class activity	CO.1	Sessional exam
L22	Schmitt Trigger and Square Wave		Lecture, presentation	CO.1	Sessional exam
L23	Triangular Wave And Pulse Generators		Lecture	CO.4	Sessional exam
L24	Numerical Questions Practice		Class activity	CO.4	Sessional exam
L25	<b>Filter Design:</b> Introduction And Basics Of Passive Filters	Learn about different practical filters, implementation and	Lecture	CO.4	In class quiz
L26	Active Filters – Introduction, Design And Analysis Of First Order Low Pass Filter	practical uses	Lecture, presentation	CO.4	In class quiz
L27	Active Filters –Design And Analysis Of First And Higher Order Low And High Pass Filters	Apply the knowledge in practical filter circuit implementation	Lecture, presentation	CO.4	Lab implementation
L28	Design And Analysis Of Band Pass Filters		Flipped classroom	CO.1, CO.3	Lab implementation
L29	Band Elimination And All Pass Active Filters		Flipped classroom	CO.1, CO.3	Lab implementation
L30	Numerical Problems		Class activity	CO.1, CO.3	In class quiz
L31	Numerical Problems		Class activity	CO.1, CO.3	In class quiz
L32	Timer: Introduction	Learn about pulse width	Lecture	CO.5	End Semester exam
L33	Basics Of Multivibrator and Theory	modulation (PWM) in practical applications and implementation	Lecture, flipped classroom	CO.5	End Semester exam
L34	555 IC Timer - Introduction	using 555 timer IC	Lecture	CO.5	End Semester exam
L35	555 IC Timer - Pin Details Of 555 I.C., Functional Diagram Of 555 IC	Design PWM circuits using 555 timer IC	presentation	CO.5	In class quiz
L36	Working of 555 Timer	uniei ic	Presentation	CO.5	In class quiz
L37	Different modes of 555 Timer		Lecture, presentation	CO.5	Lab implementation
L38	Numerical Practice		Class activity	CO.4, CO.5	Sessional exam
L39	Data Converters: Principles Of ADC And DAC	Fundamental understanding of data converters and uses	Lecture	CO.2	End Semester exam
L40	ADC/DAC – Specifications and Configuration		Presentation	CO.2	

L41	DAC – Different types and principle		Lecture	CO.2	End Semester exam
L42	ADC – Different types and principle		Class activity	CO.2	End Semester exam
L43	ADC – Different types and principle		Class activity	CO.2	Class test
L44	Voltage Controlled Oscillator (VCO)		Lecture	CO.2	
L45	Voltage Controlled Oscillator (VCO)		Class activity	CO.2	
L46	Numerical Questions Practice		Class activity	CO.2	
L47	Voltage regulation using Zener diode	Students will learn how to make	Presentation	CO.3	Student presentation
L48	<b>Regulated Power Supplies</b> Using IC's	power supplies using different ICs	Presentation	CO.3	Student presentation
L49	Analysis And Design Of Linear Series		Presentation	CO.3	Student presentation
	Voltage Regulators Using 78XX And				
	79XX Series				
L50	Circuit Diagram and Analysis of Lm317		Presentation	CO.3	Student presentation

School of Automobile Mechanical and Mechatronics Engineering

### Department of Mechatronics Engineering Course Hand-out

Theory of Machines | MC1309 | 4 Credits | 4 0 0 4

Session: July 18 – Dec 18 | Faculty: Mohit Jain | Class: Departmental Core

- **A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as a core course. This course is designed to give a clear understanding of the concepts underlying the engineering design. Simple mathematical methods are preferred to design a mechanical mechanism.
- **B. COURSE OUTCOMES:** At the end of the course, students will be able to
- **CO.1** [MC1309.1] Outline the basics of mechanisms and machines like degree of freedom along with type of mechanisms and their equivalent mechanisms.
- **CO.2** [MC1309.2] Study of velocity analysis linear velocities of various points on different links of a mechanism as well as the angular velocities of the links.
- **CO.3** [MC1309.3] Study of acceleration analysis linear acceleration of various links of a mechanism as well as the angular acceleration of the links which further leads to force analysis of various links of a mechanism.
- **CO.4** [MC1309.4] To analyse a gear design and gear train. To calculate speed of various gears in gear train and in differential gears.
- **CO.5** [MC1309.5] To synthesis a mechanical mechanism as per the required motion and to understand the concepts of Gyroscope.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1]. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **[PO.3]. Design/development of solutions**: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4]. Conduct investigations of complex problems**: Use research-based knowledge and research methods including <u>design of experiments</u>, <u>analysis and interpretation of data</u>, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and</u>

  <u>IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations</u>
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10].Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

(Summative)		
	Total	100
Attendance	A minimum of 75% Attendance is required to be maintained by a student to	
(Formative)	be qualified for taking up the End Semester examination. The allowance of	
	25% includes all types of leaves including medical leaves.	
Make up Assignments	Students who misses a class will have to report to the teacher about the	
(Formative)	absence. A makeup assignment on the topic taught on the day of absence will	
	be given which has to be submitted within a week from the date of absence.	
	No extensions will be given on this. The attendance for that particular day of	
	absence will be marked blank, so that the student is not accounted for	
	absence. These assignments are limited to a maximum of 5 throughout the	
	entire semester.	
Homework/ Home Assignment/	There are situations where a student may have to work in home. Although	
Activity Assignment	these works are not graded with marks. However, a student is expected to	
(Formative)	participate and perform these assignments with full zeal since the activity	
	classroom participation by a student will be assessed and marks will be	
	awarded.	

#### E. SYLLABUS:

Basic Concepts: Mechanism and machine, kinematic pair, link, chain and inversions, constrained and unconstrained motions, four bar mechanism, single and double slider crank mechanisms with inversions, quick return mechanism, toggle mechanism, Hooke's coupling. Velocity and Acceleration: Solution of simple mechanisms by relative velocity and acceleration method, Cams: Types of cams, Types of followers, Cam profiles, Graphical methods for simple harmonic motion, Uniform velocity and cycloidal motion, Radial and oscillating follower, Calculation of maximum velocity and acceleration of follower, Gears: Classifications, Law of gearing, Spur gear definitions, Involute tooth profile and in voluntometry, Determination of length of path of contact, Arc of contact, Contact ratio, Interference in involute gear, Minimum number of teeth on pinion to avoid interference, Parallel and crossed helical gear, Gear trains: Simple, compound, reverted and epicyclic gear train, Solution by tabular column method only, Torque transmitted by epicylic gear train, Bevel epicylic gear train, Differential gear drive of an automobile, Static and dynamic balancing: Balancing of revolving masses in single plane and different planes (Graphical method). Balancing of in-line and V-Engine, Governors: Characteristics of governors, Porter and proell governor, Hartnell governor, Gyroscope: Gyroscopic couple of a spinning disc. Condition for stability of a four wheeler and two wheeler.

### F. Text Books

- T1. Theory of Machines, S.S.Rattan,, McGrawHill
- T2. Theory of Machines and Mechanisms, Joseph E. Shigley, Oxford University Press

### G. Reference Books

- R1. Kinematics and Dynamics of Machinery, R L Norton, McGrawHill
- R2. Machines and Mechanisms Applied Kinematic Analysis, David H. Myszka, Pearson

### H. Lecture Plan:

Lec. No	Topics	Session Objective	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1-3	Introduction and Course Hand-out briefing	To acquaint and clear teachers expectations and understand student expectations	Lecture	CO.1	NA
4-7	Introduction to degree of mechanisms	To understand the importance of mechanisms	Lecture	CO.1	
8-11	Equivalent mechanisms and type of mechanisms	Application of mechanisms in different machines	Lecture	CO.1	Home Assignment
12-15	Introduction to velocity analysis of kinematic mechanisms	Need to know to reason behind calculating the velocity of links	Lecture	CO.2	
16-18	To calculate velocity of various points of links in mechanisms	To how to calculate velocity in any mechanism		CO.2	Home Assignment, Quiz
19-22	Introduction to acceleration analysis of kinematic mechanisms	Need to know to reason behind calculating the acceleration of links	Lecture	CO.3	
23-25	To calculate acceleration of various points of links in mechanisms	To how to calculate acceleration in any mechanism	Lecture	CO.3	Quiz
26-27	Introduction to gears and gear trains	To learn basics of gear design	Lecture	CO.4	
28-30	Calculation of gear trains	To calculate speed of gears in gear train	Lecture	CO.4	Home Assignment
31-32	Introduction to Synthesis	To learn the basics to how to design a mechanism	Lecture	CO.5	
33-37	Function generation and path generation and for finitely separated positions of a rigid body.	To learn how to make dimensional synthesis as per the required path	Lecture	CO.5	
38-41	Synthesis of mechanisms	Design a linkage as per required path and motion	Lecture	CO.5	Home Assignment, Quiz
42-44	Introduction to Gyroscope	Impact of gyroscope and its importance	Lecture	CO.5	
45-48	Gyroscopic effects in aeroplanes, ships, car and bicycle.	To consider the impact of gyroscope in design analysis	Lecture	CO.5	Home Assignment, Quiz

School of Humanities and social sciences

# Department of Economics Course Hand-out

Economics | EO 1323 | 3 Credits | 3 0 0 3

Session: July 18 – Dec18 | Faculty: Dr Manas Roy | Class: Core

**A. Introduction:** This course is offered by Dept. of Economics to the Engineering departments, targeting students to give basic understanding in the concept of economics. It mainly deals with economic issues related to consumer behaviour, firms, industries and business organizations to make aware the students regarding economic environment. This course also discusses the preliminary concepts associated with macroeconomic variable like GDP inflation, balance of payments etc. It explores various possibilities emerging in an economy and the role of economic policy in this context.

### **B. Course Outcomes:** At the end of the course, students will be able to

- [1323.1] Describe the basic principles of micro and macroeconomic analysis.
- [1323.2] Interpret and illustrate decision making process in practical life.
- [1323.3] Aware of the tools and techniques of economics for real world.
- [1323.4] Recognize the problems and give solutions to it.
- [1323.5] Recall the assumptions that underpin the Micro/Macro model.

### C. Program Outcomes and Program Specific Outcomes

- [PO.25]. Engineering knowledge: Demonstrate and apply knowledge of Mathematics, Science, and Engineering to classical and recent problems of electronic design & communication system.
- [PO.26]. **Problem analysis**: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **[PO.27]. Design/development of solutions**: Design a component, system, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- [PO.28]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.29]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.30].** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice

- [PO.31]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.32]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices
- **[PO.33]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.34]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.35]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.36]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
  - **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
  - **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### H. Lecture Plan:

Lec No	Topics	Session Outcome	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1	Overview of the course structure	To acquaint and clear the overview of the course	Lecture	NA	NA
2	Objective of the course	Discussion of the objective of the course for the engineers	Lecture	NA	NA
3,4	Definition, nature and scope of economics, introduction to micro and macroeconomics	Describe the concept given by different economists, its scope, differences between micro and macro economics	Lecture	1323.1	Class Test Mid Term I
5,6,7,	Cardinal approaches of utility	Describe the concept of cardinal approach of utility, Law of DMU and equi marginal utility	Lecture	1323.1	Class Test Mid Term I
8,9,10,11	Law of demand and supply, elasticity of demand and supply	Describe the concept of demand, supply, elasticity of demand and supply with examples, conceptual questions	Lecture	1323.1	Class Test Mid Term I
12	Revision of previous lectures	Recall all the concepts discussed in previous classes	Lecture	1323.5	Class Test Mid Term I End Term
13	Discussion of the topics related to assignment	Discussion about the assignment topics	Lecture, Activity		Home Assignment Mid Term 1 End term
14,15,16	Ordinal approaches of utility	Recall of the differences between the concept of the cardinal approach and ordinal approach of utility, IC analysis, Consumers equilibrium, IE,SE,PE	Lecture	1323.5	Class Test Mid Term I End Term
17,18,19	Production, laws of production	Discussion of the concept of production, recognize production function, producers equilibrium, RTS	Lecture	1323.4	Class Test Mid Term II End Term
20,21	Cost and revenue analysis	Discussion of the concept of cost and cost function, recognize SR and LR cost curves, revenues	Lecture	1323.4	Class Test Mid Term II End Term
22,23	Various market situations; Break even analysis	Aware of market morphology with examples, Interpret and illustrate BEA	Lecture	1323.3	Class Test Mid Term II End Term
24	Revision of previous lectures	Recall all the concepts discussed in previous classes	Lecture	1323.5	Class Test Mid Term II End Term
25	Discussion of the topics related to assignment	Recall the discussion about the assignment topics	Activity	1323.5	Home Assignment Mid Term II End term
26	Capital budgeting	Interpret and illustrate the concept of CB and various tools	Lecture	1323.2	Home Assignment Class Test End Term

27,28	Macro Economics: National income and its concepts	Interpret and illustrate the concept of NI,GDP,GNI,PI etc., circular flow	Lecture	1323.2	Home Assignment Class Test End Term
31,32,33	Monetary and fiscal policies	Concept of monetary and fiscal policies, Aware of its instruments, importance and limitations	Lecture	1323.3	Home Assignment Class Test End Term
34,35	Inflation	Concept of inflation, Aware of demand pull and cost push inflation	Lecture	1323.3	Home Assignment Class Test End Term
36,37	Various macro concepts: Balance of payments, Business cycles	Aware of the concept of BOP, Business cycles	Lecture	1323.3	Home Assignment Class Test End Term
38	Discussion of the topics related to end sessional examination	Recall the discussion about the assignment topics	Lecture	1323.5	End Term
39	Conclusion and Course Summarization	Recall all the concepts discussed in previous classes	Lecture	1323.5	End Term

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Analogue System Design Lab | MC 1331 | 1 Credits | 0 0 2 1

Session: July 18 - Nov 18 | Faculty: Anil Sharma | Class: B. Tech III Sem

- **A. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to pursue research& development in industries or higher studies in field of Mechatronics Engineering, including analog signal processing and signal conditioning. Offers hands-on experience on amplifiers, filters, and wave form generators etc.
- **B.** Course Outcomes: At the end of the course, students will be able to
- [1410.1]. Implementation of linear applications of op-amp and its practical uses.
- [1410.2]. Analyse active filter behaviour and its practical uses.
- [1410.3]. Implementation of Non-linear applications of op-amp and its practical uses.
- [1410.4]. Design of circuits to get different waveforms and practical applications.

### C. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u>

  <u>engineering and IT tools</u> including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7].** Environment and sustainability: Understand the <u>impact of the professional engineering solutions in</u> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions

- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills, and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### D. Assessment Plan:

Criteria	Description	Maximum Marks						
Internal Assessment (Summative)	Laboratory Sessions	60						
End Term Assesment (Summative)	Lab Exam Performance	40						
	Total	100						
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student qualified for taking up the Practical End Semester examination. The allowa 25% includes all types of leaves including medical leaves.							
Make up Assignments (Formative)	Students who misses a lab session will have to report to the teacher about absence. The missed experiment can be performed as a makeup experiment in next lab session or any time before the laboratory exam							
Laboratory Guidelines	Students are expected to maintain an observation book and a laboratory notebook. The experimental data should be noted in the observation book on to f performance and the same should be transferred to the record notebook beforext lab. No students are allowed to enter the lab without the observation borecord book and attendance will be marked absent							

### E. Syllabus

Negative feedback amplifiers: inverting and non-inverting mode, Instrumentation amplifier, summer, Voltage follower, Integrators, Differentiators, Filters: low pass filter, high pass filter, Square wave generator, Triangular wave generator, Schmitt trigger: inverting and non-inverting mode, Multi-vibrators using IC 555: Astable multivibrator, Monostable multi-vibrator, Half wave and Full wave precision Rectifier using OPAMP. Voltage regulator using LM317, 7805 ICs.

Criteria	Description	Maximum Marks						
Internal Assessment (Summative)	Laboratory Sessions	60						
End Term Assesment (Summative)	Lab Exam Performance	40						
	Total	100						
Attendance (Formative)								
Make up Assignments (Formative)	Students who misses a lab session will have to report to the teacher about absence. The missed experiment can be performed as a makeup experiment in next lab session or any time before the laboratory exam  Students are expected to maintain an observation book and a laboratory re notebook. The experimental data should be noted in the observation book on the of performance and the same should be transferred to the record notebook before next lab. No students are allowed to enter the lab without the observation book record book and attendance will be marked absent							
Laboratory Guidelines								

### L. List of experiments

Experiment -1	Study and perform the characteristics of Thermocouple
Experiment - 2	Study and perform the characteristics of Thermistor
Experiment -3	Study and perform the characteristics of Strain Gauge
Experiment -4	Perform the experiment of Angular velocity Measurement
Experiment -5	Study and perform the characteristics of LDR, Photodiode and Phototransistor
Experiment -6	Perform the experiment of DC Servo Motor Speed Control System
Experiment -7	Study and perform the characteristics of Resistance Temperature Detector
Experiment -8	Study and perform the characteristics of Linear Variable Differential Transformer
Experiment -9	Perform the experiment of Digital to Analog Converter
Experiment -10	Perform the experiment of Piezo-Electric Transducer
Experiment -11	Study and perform the characteristics of Inductive pickup
Experiment -12	Study and perform the characteristics of Capacitive pickup
Experiment -13	Perform the experiment of Hall Effect Transducer
Expreiment -14	Perform the experiment of Analog to Digital converter

School of Automobile Mechanical and Mechatronics Engineering

Department of Mechatronics Engineering Course Hand-out

Design of Machine Elements | MC1405 | 4 Credits | 4 0 0 4

Session: Jan 19 – May 19 | Faculty: Mohit Jain | Class: Departmental Core

**A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as departmental core. This course covers the design and analysis of scientific principles. Technical information and innovative ideas for the development of a new or improved machine. It also develops new technical information and imagination in description of a machine or a mechanical system to perform specific functions with maximum economy and efficiency.

### **B. COURSE OUTCOMES:** At the end of the course, students will be able to

[MC1405.1] Outline the basics of the critical material properties in design, such as stress, strength and analyse stresses and strains in machine elements and structures subjected to various loads.

[MC1405.2] To interpret how the Quality fatigue analysis take place and along with their specify causes for machine design failure. Analyse the problems associated with fasteners, screws and shafts.

[MC1405.3] Describe about the design of transmission shaft, materials, permissible stresses, design for static and fatigue load, ASME code for shaft design. Design of keys: types of keys, application, stresses in the key, selection of keys.

[MC1405.4] To implement Gear analysis, understand gear train arrangement and force analysis. Standard procedure and their application in static and fluctuating analysis. (Gears: Spur, Helical, Bevel and Worm).

[MC1405.5] Select the suitable bearing, bearing arrangement, material and design various type of bearings (hydrostatic, hydrodynamic, journal bearings), with standard design procedure to enhance the employability.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

[PO.1].Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems

**[PO.2].Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

[PO.3].Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

[PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

- [PO.6].The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice</u>
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- [PO.10].Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **D.** Assessment Rubrics:

Criteria	Description	Maximum Marks								
	Sessional Exam I (Closed Book)	15								
Internal Assessment	Sessional Exam II (Closed Book)	15								
(Summative)	In class Quizzes and Assignments,	30								
	Activity feedbacks (Accumulated and									
	Averaged)									
End Term Exam	End Term Exam (Close Book)	40								
(Summative)										
	Total	100								
Attendance	A minimum of 75% Attendance is req	uired to be maintained by a student to								
(Formative)	be qualified for taking up the End Semester examination. The allowance of									
	25% includes all types of leaves include	ding medical leaves.								
Make up Assignments	Students who misses a class will ha	ve to report to the teacher about the								
(Formative)	absence. A makeup assignment on the	topic taught on the day of absence will								
	be given which has to be submitted w	ithin a week from the date of absence.								
	No extensions will be given on this. The	he attendance for that particular day of								
	absence will be marked blank, so the	hat the student is not accounted for								
	absence. These assignments are limited	ed to a maximum of 5 throughout the								
	entire semester.									
Homework/ Home Assignment/	There are situations where a student	may have to work in home. Although								
Activity Assignment	these works are not graded with mark	ks. However, a student is expected to								
(Formative)	participate and perform these assignr	nents with full zeal since the activity								
	classroom participation by a student	will be assessed and marks will be								
	awarded.									

### E. SYLLABUS:

Basic Concepts: Fundamentals of Mechanical Design: The Design Process, Economics of Design, Reliability, Safety and Product Liability, Codes and Standards, Types of Materials, Stress-Strain Response, Types Of Loads and Stresses, Failure Modes, Factor of Safety, Strength Design. Static And Variable Stress Analysis: Static Strength, Failure Theories, Stress Concentration, Fatigue Strength, Stress-Life (S-N) Diagram, High Cycle Fatigue, Endurance Limit Modifying Factors, Effect of Mean Stress, Fluctuating Stresses, and Stresses due to Combined Loading. Design of Transmission Shaft: Materials, Permissible Stresses, Permissible Deflection And Permissible Angular Twist, Power Transmitting Elements, Design For Static And Fatigue Load, ASME Code For Shaft Design. Design of Keys: Types of Keys, Application, Stresses in the Key, Selection of Keys. Coil Springs: Helical Coil Spring: Compression Springs of Round/Square/Rectangular Wires, Spring Materials, Stress And Deflection of Spring Subjected to Steady, Fluctuating and Impact Loads, Spring Surge and Buckling, Concentric Springs. Power Screws: Types of Power Screws, Terminology, Torque for Power Screws, Collar Friction, Efficiency, Nut for The Power Screw, Stresses in Power Screws, Threaded Fasteners: Effect of Initial Tension, Load on Axially Loaded Bolt, and Bolts for Pressure Vessels. Gears: Spur and Helical Gears: Merits, Terminology, Tooth Profile, Pressure Angle, Lewis Equation for Beam Strength, Form Factor, Velocity Factor, Design for Static Loads, Design for Dynamic and Wear Loads.

### F. Lecture Plan:

Lec. No	Topics	Session Objective	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1	Introduction and Course Hand-out briefing	To acquaint and clear teachers expectations and understand student expectations	Lecture	NA	NA
2	Introduction to Stress-Strain diagrams for Ductile and Brittle materials	To understand the importance of Stress-Strain diagrams for materials	Lecture	CO.1	In Class Quiz ( Not Accounted)
3,4	Strain Energy, Resilience, Toughness, Hardness, Creep & Temperature, contact stresses, Material Specification	Few definitions for understand the nature of the material properties	Lecture	CO.1	In Class Quiz
5,6	Strength Concepts: Principle Stresses, Theories of failure, Factor of Safety	Physical meaning of the terms and its usage	Lecture	CO.1	Home Assignment
710	Fatigue: S-N diagram, Low cycle and high cycle fatigue, Endurance limit, Numerical problems	To practice numerical on Low cycle and high cycle fatigue, Endurance limit mathematically	Lecture,	CO.1 & CO.2	In Class Quiz
11	Variables affecting Fatigue strength, Fluctuating stresses	Study of design	Lecture,	CO.2	Home Assignment Class Quiz
12-14	Goodman & Soderberg equations, Modified Goodman equation, Stresses due to combined loading, Numerical problems	Study and practice to check the stresses in system	Lecture	CO.2	Class Quiz
15	Shafts: Torsion of circular solid & hollow shafts	Introduction of shafts	Lecture	CO.3	Class Quiz
16-17	Design of shafts subjected to bending in two planes in addition to axial loads, Numerical problems	Acquaint students with the detail overview of design data book	Design Data Book	CO.3	Class Quiz
18-19	Keys & Pins: types of Keys and Pins, Stresses in Keys, Design of square Keys	Acquaint students with design of Shaft Key assembly	Lecture	CO.3	Class Quiz, Case Study
20	Design of Rectangular Keys, Design of taper Keys	What are the other types of key	Flipped Classroom	CO.3	Class Quiz
21	Gear & Gear Types and Nomenclature of gears, Fundamentals of gears	Acquaint students about Gear Terminology	Flipped Classroom	CO.4	Class Quiz
22-23	Conjugate action and Involute Properties, selection of gears	How to use properties of gear to select gear	Lecture	CO.4	Class Quiz

24-25	Static Force analysis on gears teeth, Analyses of strength of gear teeth	Analysis for gear strength	Lecture	CO.4	Class Quiz
26	Dynamic Effects of forces on gear teeth, Numerical problems	Make students to use design data book to solve numerical	Lecture	CO.4	Home Assignment
27	Estimation of Gear size with numerical problems	Make students to use design data book to solve numerical	Lecture	CO.4	Class Quiz
28-29	Fatigue Strength and consideration of Factor of safety.	Acquaint students about the application of formulas	Lecture	CO.4	Class Quiz
30-31	Velocity Factor, Design for Static Loads,	Acquaint students about the application of formulas	Lecture	CO.4	Class Quiz
32-33	Design for Dynamic and Wear Loads	Application of formulas as well as Design Data Book	Lecture	CO.4	Class Quiz
34-36	Numerical Problems on Spur gear design	Application of formulas as well as Design Data Book	Lecture	CO.4	Class Quiz
38-40	Helical Gears- Static Force analysis on gears teeth, Analyses of strength of gear teeth	Application of formulas as well as Design Data Book	Lecture	CO.4	Class Quiz
41	Introduction. Type of Rolling contact bearings,	Acquaint students about the application of basic formulas	Lecture	CO.5	Class Quiz
42-44	Principle of self-aligning Bearing, Selection of bearing type, Static Load Carrying Capacity	Application of formulas	Lecture	CO.5	Class Quiz
45	Stribeck's Equation, Dynamic Load Carrying Capacity, Equivalent Bearing Load	Make students to use design data book to solve numerical	Lecture	CO.5	Class Quiz
46-47	Load- Life relationship, Selection of bearing life, load factor, Numerical Problems	Make students to use design data book to solve numerical	Lecture	CO.5	Class Quiz
48	Sliding contact bearing, Viscosity, VI, Petroff's Equation, McKee's Investigation.	Make students to use design data book to solve numerical	Lecture	CO.5	Class Quiz
50-52	Hydrostatic Step Bearing, Energy Losses in Hydrostatic Bearing, Reynold's Equation, Raimondi and Boyd Method.	Application of formulas	Lecture	CO.5	Class Quiz
53-55	Selection of bearing parameters, Temperature rise and Numerical Problems	Make students to use design data book to solve numerical	Lecture	CO.5	Class Quiz

### Department of Mechatronics Engineering Course Hand-out

Digital System Design | MC1406 | 4 Credits | 4 0 0 4

Session: Jan 19 – May 19 | Faculty: Princy Randhawa | Class: Core Subject

**A. INTRODUCTION:** This course will cover the introduction of number system, binary arithmetic's and codes and also deals with Boolean algebra, simplification using Boolean theorems, K-map method and also introduce the logic gates and implementation of switching functions using basic gates. And also student can understand about the description of combinational circuits like arithmetic and data processing and it also describes flip-flops and realization using flip-flops and it also discusses synchronous and asynchronous counters and the design of counters this course also presents detail of shift registers and their designs and it also concentrates on design of synchronous and asynchronous sequential circuits.

### **B. COURSE OUTCOMES:** At the end of the course, students will be able to

- [MC1406.1] Define the fundamental concepts and techniques used in digital electronics.
- [MC1406.2] Explain the elements of digital system abstractions such as digital representations of information, digital logic, Boolean algebra.
- [MC1406.3] To understand and examine the structure of various number systems and its application in digital system design
- [MC1406.4] The ability to understand, analyse and design various combinational and sequential circuits like decoders, Multiplexers, counters, registers, etc.
- [MC1406.5] Evaluate combinational and sequential logic designs using various metrics: switching speed,
  Throughput/latency, gate count and area, energy dissipation and power to enhance employability skills
  [MC1406.6] Identify and prevent various hazards and timing problems in a digital design.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an Engineering specialization to the solution of complex engineering problems.
- [PO.2].Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching Substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3].Design/development of solutions: Design solutions for complex engineering problems and design system Components or processes\_that meet the specified needs with appropriate consideration for the public health and Safety, and the cultural, societal, and environmental considerations.
- [PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including Design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid Conclusions.
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the Limitations.

- [PO.6].The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, Safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering Practice
- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the Engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.10].Communication: Communicate effectively on complex engineering activities with the engineering

  Community and with society at large, such as, being able to comprehend and write effective reports and design

  Documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and Management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, Power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [**PSO.3**]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### H. Lecture Plan:

Lec. No	Topics	Session Objective	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1	Introduction and Course Hand-out briefing	To acquaint and clear teachers expectations and understand student expectations	Lecture	NA	NA
2	Number Systems and Codes: Review of number systems, BCD codes and Arithmetic	It gives the detailed study of different number systems	Lecture	CO.1	In Class Quiz ( Not Accounted)
3,4	Gray code, self-complimenting codes, Error detecting and correcting codes	To understand the different codes- Weighted and Non-Weighted Codes	Lecture	CO.2	In Class Quiz
5,6	Digital Circuits: Switching algebra & simplification of Boolean expressions, Demorgan's theorem Implementation of Boolean expressions using logic	It introduces Boolean Algebra ,theorems, and Simplification of Boolean Expression by Algebraic method	Lecture	CO.3	Home Assignment
79	Implementation of Boolean expressions using logic gates, K-Map-5 variable, Quine – McClusky Method	Another method also known as tabular method for simplifying Boolean expression	Lecture, Flipped Classroom	CO.3	Home Assignment
10	Logic gates: Performance metrics of logic gates	To understand the different logic operations which can be realised by electronic circuits, Boolean Constants, Variables and Functions	Presentation	CO.3	Home Assignment Class Quiz
11-14	Logic Families-Characteristics of Digital ICs, RTL, DTL, TTL, CMOS, ECL, Comparison of Logic gates.	It introduces the fundamental concepts of logic families of digital ICs and its characteristics and the interfacing problems between ICs of same logic families and between those of different logic families to obtain maximum benefits	Presentation ,Lecture	CO.5	Seminar

15-16	Design of Arithmetic circuits -code converters	It explains various code converters like BCD, Excess 3, Gray code and their designs.	Lecture	CO.4 & CO.6	Seminar
17-18	Adder, Subtractor and its Implementation using Logic gates	To learn about the combinational	Lecture	CO.4	Class Quiz
19-20	Combinational-Circuits—Multiplexer and Demultiplexer &its applications	logic design using MSI circuits which is important for the design	Lecture	CO.4	Class Quiz,
21	Decoders -3-to-8 Decoder 4-to-16 Decoder	of digital systems considering the simplicity in design ,space, power	Flipped Classroom	CO.4	Class Quiz
22-23	Implementation of Higher order Decoders using low order decoders, Encoders	requirement, speed and other factors	Lecture	CO.4	Case Study
24	Seven Segment Decoder, Magnitude Comparators, Applications of Comparators		Lecture	CO.4	Class Quiz
25-30	Flip-flops-Difference between latch and flip- flop, Types of flip-flop-SR, JK,D,T Triggering of Flip-flop, Master slave flip- flop	It introduces the basic building blocks of sequential circuits i.e. memory devices	Lecture	CO.4	Class Quiz
31-32	Realisation of One flip-flop using other Flip-flops, Applications of Flip-Flops,	Study of Different types of flip- flops and their applications	Lecture	CO.4	Home Assignment
33-35	Counters-Introduction, Ripple Counter, Ripple counter with Modulus, Up-Down Counter, Propagation Delay	Study of Detailed information of serial and parallel counters	Lecture	CO.5	Class Quiz
36-37	Design of Synchronous Counters, Counter Implementation and Applications	paramer economic	Lecture	CO.5 &CO.6	Class Quiz
38-42	Registers- Shift Register-SISO, SIPO,PIPO,PISO, Universal Shift Registers, shift Register Counters	Discusses the importance of registers and its analysis and design	Lecture	CO.5	Class Test
43-45	Classification of Sequential Circuits Synchronous Sequential Circuits- Algorithm State Machine, ASM Charts	Discusses the analysis and design of synchronous sequential circuits	Lecture	CO.5	Class Test
46	Asynchronous Sequential Circuits- Design of Fundamental Mode Asynchronous Sequential Circuits	Discusses the analysis and design of asynchronous sequential circuits	Lecture	CO.5 & CO.6	Class Test

47	Relationship between State Machine and	Introduces State Machine,	Lecture	CO.5	Class Test
	ASM Charts	Compare the difference between			
		state machine and ASM charts			
48-49	Problems in Asynchronous Circuits-Cycles,	Introduces the problems in	Lecture	CO.5	Class Test
	Races and Hazards	Asynchronous Sequential Circuits			
50-51	Design of Hazard free Switching Circuits	Methods for Design of Hazard	Lecture	CO.5 &CO.6	Class Test
		free switching circuits			
52-53	Revision	NA	Flipped	NA	NA
			Classroom

### School of Automobile Mechanical and Mechatronics Engineering

### Department of Mechatronics Engineering

# Course Hand-out FLUID MECHANICS AND MACHINES | MC1407 | 4 Credits | 4 0 0 4

Session: Jan 19 – May 19 | Faculty: Hemant Kumar | Class: Dep. Core (IV Sem)

- **A. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a department core, for all the students to enable them to develop an understanding of Newtonian fluids under static and dynamic conditions with the help of appropriate conservation equations. Further to apply the fundamentals for investigating variety of applications including basic pipe flow, fluid machinery, sports etc.
- **B.** Course Objectives: At the end of the course, students will be able to
- [1407.1]. To describe the static and dynamic fluid systems using respective governing equations.
- [1407.2]. Devise simple solutions to a range of problems in basic fluid flow
- [1407.3]. To apply concepts of mass, momentum and energy conservation to flows
- [1407.4]. To able to analyze variety of simplified flow problems theoretically
- [1407.5]. Grasp the basic ideas of turbulence
- [1407.6]. Identify various types of pumps and turbines and know their working principles to enhance employability skills

### C. Program Outcomes and Program Specific Outcomes

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
  - **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research

methods including design of experiments, analysis and interpretation of data, and synthesis of the

information to provide valid conclusions

**[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering</u> and <u>IT tools</u> including prediction and modeling to complex engineering activities with an

understanding of the limitations

[PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess</u> <u>societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering

- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10]. Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
  - [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### D. Assessment Plan:

Criteria	Description	Maximum Marks
	Sessional Exam I	15
Internal Assessment	Sessional Exam II	15
(Summative)	In class Quizzes and Assignments,	30

	Activity feedbacks (Accumulated and Averaged)	
End Term Exam	End Term Exam (Open Book)	40
(Summative)		
	Total	100
Attendance	A minimum of 75% Attendance is required to be maintained by a student	
(Formative)	to be qualified for taking up the End Semester examination. The allowance	
	of 25% includes all types of leaves including medical leaves.	

Make up Assignments	Students who misses a class will have to report to the teacher about the
(Formative)	absence. A makeup assignment on the topic taught on the day of absence
	will be given which has to be submitted within a week from the date of
	absence. No extensions will be given on this. The attendance for that
	particular day of absence will be marked blank, so that the student is not
	accounted for absence. These assignments are limited to a maximum of 5
	throughout the entire semester.
Homework/ Home Assignment/	There are situations where a student may have to work in home, especially
Activity Assignment	before a flipped classroom. Although these works are not graded with
(Formative)	marks. However, a student is expected to participate and perform these
	assignments with full zeal since the activity/ flipped classroom participation
	by a student will be assessed and marks will be awarded.

#### E. Syllabus

Fundamentals: Definition and properties of fluids, intensity of pressure, variation of pressure in a static fluid, Absolute, Gauge, Atmospheric and Vacuum pressure Manometers, Fluid statics: Hydro static forces and centre of Pressure on vertical and inclined plane surfaces, Buoyancy, centre of Buoyancy, Metacentre and Meta-centric height, Analytical method for determination of Metacentric height, Stability of floating and sub-merged bodies, Kinematics and Dynamics of fluid flow: Types of fluid flow, continuity equation, one dimensional Euler's equation of motion, Bernoulli's energy equation, Fluid flow measurements: Pitot tube, orifice meter and venture meter, Fluid flow in pipes: Darcy weisbach equation. Losses in pipes - Minor and major losses, Dimensional analysis and Similitude: Methods of dimensional analysis, similitude, Impact of jet: Force exerted by the jet on stationery vanes and moving vanes, Hydraulic turbines: Pelton turbine, Francis turbine and Kaplan turbine (Constructional feature, working principle Velocity triangle, governing mechanisms and simple problems), Centrifugal pumps: Single-stage and multistage pumps - constructional feature, working principle, velocity triangles and simple problems.

#### F. Text Books

- a. Frank M. White, Fluid Mechanics, McGraw Hill, 7th edition, 2011.
- b. Yunus A Cengel and John M. Cimbala, Fluid Mechanics, Tata McGraw-Hill Education, 3rd edition, 2010

#### G. Reference Books

- a. Victor Lyle Streeter, E. Benjamin Wylie, Fluid mechanics, McGraw Hill, 9<sup>th</sup> edition, 2010
- b. Pijush K. Kundu, Ira M. Cohen, David R. Dowling, Fluid Mechanics, Academic press, 5th Edition, 2012

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mathematics & Statistics Course Hand-out

Engineering Mathematics IV | MA 1410 | 3 Credits | 3 0 2 3

Session: Jan. 19 – May 19 | Faculty: Dr. Anamika Jain

- **P.** Introduction: This course is offered by Dept. of Mathematics as core subject, targeting students who wish to pursue research & development in industries or higher studies in field of Engineering Mathematics. Offers in depth knowledge of Numerical analysis, Solution of algebraic and transcendental equations, Solution of differential equations, partial differential equations by numerical methods, Basic knowledge Statistics, Distributions and Tensors. Students are expected to have background knowledge on finding roots of algebraic equations, differential equations, probability, two and three dimensional geometry for a better learning.
- **Q.** Course Objectives: At the end of the course, students will be able to
  - [1410.5]. Analysis the problems of engineering by using Numerical analysis.
  - [1410.6]. Solve for the zero of a non-linear algebraic function using bisection and regula- falsi methods, as well as Newton-Raphson and secant iteration methods.
  - [1410.7]. Solve the ordinary and partial differential equations by using numerical methods.
  - [1410.8]. Draw normal distribution curve and will be able to compare the results.
  - [1410.9]. To understand and calculate figures of more than three dimensions.

#### R. Program Outcomes and Program Specific Outcomes

- [PO.37]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.38]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.39]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.40].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.41]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

- [PO.42]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.43]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.44].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.45]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings.
- **[PO.46].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.47]. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.48]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change.

#### PROGRAM SPECIFIC OUTCOMES

- [PSO.4]. Autotronics and Electric Vehicle Technology: <u>Apply</u> knowledge of electrical and electronics engineering for providing automobile engineering solutions.
- [PSO.5]. Alignment to Super Qualification packs of ASDC: Demonstrate knowledge and performance criteria as defined by ASDC super qualification packs for R&D or Quality or Service Engineering.
- [PSO.6]. Application of Lean Six Sigma Methodology: <u>Demonstrate through an internship project</u>, the knowledge and understanding of lean six sigma methodology based on Define, Measure, analyse, improve/develop and control/validate phases (DMAIC/ DMADV).

# Department of Mathematics & Statistics Course Hand-out

Engineering Mathematics IV | MA 1410 | 3 Credits | 3 0 2 3

Session: Jan. 17 – May 17 | Faculty: Dr. Anamika Jain

- **Z.** Introduction: This course is offered by Dept. of Mathematics as core subject, targeting students who wish to pursue research & development in industries or higher studies in field of Engineering Mathematics. Offers in depth knowledge of Numerical analysis, Solution of algebraic and transcendental equations, Solution of differential equations, partial differential equations by numerical methods, Basic knowledge Statistics, Distributions and Tensors. Students are expected to have background knowledge on finding roots of algebraic equations, differential equations, probability, two- and three-dimensional geometry for a better learning.
- **AA.** Course Objectives: At the end of the course, students will be able to
  - [1410.10]. Analysis the problems of engineering by using Numerical analysis.
  - [1410.11]. Solve for the zero of a non-linear algebraic function using bisection and regula- falsi methods, as well as Newton-Raphson and secant iteration methods.
  - [1410.12]. Solve the ordinary and partial differential equations by using numerical methods.
  - [1410.13]. Draw normal distribution curve and will be able to compare the results.
  - [1410.14]. To understand and calculate figures of more than three dimensions.

#### **BB.** Program Outcomes and Program Specific Outcomes

- [PO.49]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.50]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.51]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.52]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.53]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

- [PO.54]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.55]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.56].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.57]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings.
- [PO.58]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.59]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.60]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change.

#### PROGRAM SPECIFIC OUTCOMES

- [PSO.7]. Autotronics and Electric Vehicle Technology: <u>Apply</u> knowledge of electrical and electronics engineering for providing automobile engineering solutions.
- [PSO.8]. Alignment to Super Qualification packs of ASDC: Demonstrate knowledge and performance criteria as defined by ASDC super qualification packs for R&D or Quality or Service Engineering.
- [PSO.9]. Application of Lean Six Sigma Methodology: <u>Demonstrate through an internship project</u>, the knowledge and understanding of lean six sigma methodology based on Define, Measure, analyse, improve/develop and control/validate phases (DMAIC/ DMADV).

	maximum of 5 throughout the entire seme	ester.									
Homework/ Home Assignment/	There are situations where a student may	have to work in home, especially before a									
Activity Assignment	flipped classroom. Although these works	s are not graded with marks. However, a									
(Formative)	student is expected to participate and perf	orm these assignments with full zeal since									
		on by a student will be assessed and marks									
	will be awarded.										

#### DD. Syllabus

**Tensor:** Introduction to tensors, Cartesian tensors, Rank of tensor, First, second and higher order tensors, Algebraic operation on tensors, contraction of tensors, Contravariant and covariant vectors and tensors, Theorem based on tensors. **Solution of Non Linear Equations:** Bisection, Newton-Raphson, Regula Falsi, Secant Methods. **System of Simultaneous Linear Equations:** Gauss elimination method, Gauss-Jacobi, Gauss-Seidel. **Solution of Initial Value Problems:** Taylor's series method, Euler method, modified Euler method, Runge-Kutta 4<sup>th</sup> order method. **Finite Difference Methods:** Solution of Laplace and Poisson equations by standard five point formula, Solution of heat equations by Crank-Nicolson method, Solution of Wave Equations. **Statistics:** Correlation, Regression, Random variables, Probability distributions – Binomial, Poisson, Normal.

## **GG.** Lecture Plan:

Lec No	Topics	Session Outcome	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1	Introduction	To acquaint and clear teachers expectations and understand student expectations	Lecture	NA	NA
2,3	Solution of Non Linear Equations: Bisection	Recall working of Non Linear Equations	Lecture	1410.1	In Class Quiz ( Not Accounted)
4,5	Secant Methods	Identify different numerical problems and describe their formation	Lecture, Activity	1410.1	In Class Quiz End Term
6	Regula Falsi Method	Explain Regula Falsi Method and their formation and solution Processes	Lecture	1410.2	Home Assignment End Term
7,8	Generalized Newton Raphson Method, Newton Raphson Method for a system of non-linear equations	Explain Newton Raphson Method and their formation and properties	Lecture	1410.2	In Class Quiz End Term
9	Solution of system simultaneous Linear Equation- Gauss elimination method	Recall system simultaneous Linear Equation and explain Gauss elimination method	Lecture, Activity	1410.2	Class Quiz Mid Term I End Term
10	Gauss Jacobi	Recall system simultaneous Linear Equation and explain Gauss Jacobi method	Lecture	1410.2	Class Quiz Mid Term 1 End term
11	Gauss Seidel	Recall system simultaneous Linear Equation and explain Gauss Seidel method	Lecture	1410.2	Home Assignment Class Quiz Mid Term 1 End Term
12	Solution of Initial Value Problems- Taylor's series method	Recall Initial Value Problems and explain Taylor's series method and their problems	Lecture	1410.3	Class Quiz Mid Term 1 End Term
13	Euler method	Recall Initial Value Problems and explain Euler method and their problems	Lecture	1410.3	Class Quiz Mid Term I End Term
14	Modified Euler method	Recall Initial Value Problems and explain Modified Euler method and their problems	Lecture	1410.2	Class Quiz End Term
15,16	Runge-Kutta 4 <sup>th</sup> order method	Analyse Initial Value Problems and explain Runge-Kutta 4 <sup>th</sup> order method and their problems		1410.2	Class Quiz Mid Term II End Term

17	Finite Difference Methods: Solution of Laplace equations by five point formula	Examine Finite differential methods and their properties and explain solution of Laplace equations by five point formula	Lecture, Activity	1410.3	Class Quiz Mid Term II End Term
18	Solution of Poisson equations by five point formula	Examine Finite differential methods and their properties and explain solution of Poisson equations by five point formula	Lecture, Activity	1410.3	Class Quiz Mid Term II End Term
19	Heat equations	Examine Finite differential methods and their properties and explain solution of Heat equations	Lecture	1410.3	Class Quiz Mid Term II End Term
20,21	Wave equations	Examine Finite differential methods and their properties and explain solution of Wave equations	Lecture	1410.3	Class Quiz End Term
22,23	Statistics: Probability,	Knowledge of basic	Lecture	1410.4	Class Quiz
24.25	Random Variables	concept of probability	Lagture	1410.4	End Term
24,25	Probability Distributions: Binomial Distribution	Understanding of Binomial Distribution	Lecture, Activity	1410.4	Class Quiz End Term
26	Poisson Distribution	Understanding of	Lecture,	1410.4	Class Quiz
20	Torson Distribution	Poisson Distribution	Activity	1110.1	End Term
27,28	Normal Distribution	Understanding of	Lecture,	1410.4	Class Quiz
		Normal Distribution	Activity		End term
29,30	Correlation	Knowledge of basic concept of Correlation	Lecture, Activity	1410.4	Class Quiz
31	Regression	Knowledge of basic concept of Regression	Lecture, Activity	1410.4	Class Quiz Mid Term II End Term
32,33	least square principle of curve fitting	Use of curve fitting	Lecture, Activity	1410.4	Class Quiz Mid Term II End Term
34	Tensor: Introduction to tensors	Knowledge of basic concept of Tensor	Lecture	1410.5	Class Quiz Mid Term II End Term
35, 36	Cartesian tensors, Rank of tensor	Examine Cartesian tensors, Rank of tensor	Lecture	1410.5	Class Quiz End Term
37	First, second and higher order tensors	Examine First, second and higher order tensors	Lecture	1410.5	Class Quiz End Term
38,39	Algebraic operation on tensors	Describe Algebraic operation on tensors	Lecture	1410.5	Class Quiz End Term
40	Contraction of tensors	Describe Contraction of tensors	Lecture	1410.5	Class Quiz End Term
41	Theorem based on tensors	Describe Theorem based on tensors	Lecture	1410.5	Class Quiz End Term

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Computer Aided Drawing Lab | MC 1430 | 1 Credits | 0 0 2 1

Session: Jan 19 - May 19 | Faculty: Mohit Jain | Class: B. Tech IV Sem

- **P.** Introduction: This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to learn design machine parts of a machine, robotic link and mechanism. It includes 2D and 3D modelling of machine parts.
- **Q.** Course Outcomes: At the end of the course, students will be able to
- [1410.15]. Create technically correct surface and solid models that are common to and useful for visualization and problem solving in design and robotics engineering disciplines using various design software programs such as AutoCad
- [1410.16]. Create technical presentations of models from mechanical and design engineering disciplines in both technically correct and visually pleasing solid, orthographic, and section view formats
- [1410.17]. Produce project design documentation using modeling skills in project-based assignments using Auto Cad and Creo
- [1410.18]. Coordinate design and mechanical engineering models into the design development process

### R. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **[PO.3]. Design/development of solutions**: Design solutions for complex engineering problems and <u>design</u> <u>system components or processes</u> that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in</u> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings

- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills, and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Assessment Plan:**

Criteria	Description	Maximum Marks									
Internal Assessment (Summative)	Laboratory Sessions	60									
End Term Assesment (Summative)	Lab Exam Performance	40									
·	Total	100									
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking up the Practical End Semester examination. The allowance of 25% includes all types of leaves including medical leaves.										
Make up Assignments (Formative)		have to report to the teacher about the performed as a makeup experiment in the poratory exam									
Laboratory Guidelines	Students are expected to maintain an observation book and a laboratory recornotebook. The experimental data should be noted in the observation book on the datof performance and the same should be transferred to the record notebook before the next lab. No students are allowed to enter the lab without the observation book and record book and attendance will be marked absent										

#### S. Syllabus

Introduction: Modelling Using Pro Engineer; Protrusion, shell; Revolve, sweep; Chamfer, fillet, hole, parallel blend; Rotational blend Sketcher, rotational pattern, reference pattern, Part Assembly; Finite Element Analysis using ANSYS: 2D spur 2D beam element; 2D solid element, 2D thermal element; Shell element; 3D sold element

Course Hand-out

Value, Ethics & Governance BB1101 [2 Credits] [2 0 0 2]

Session: Jan-May, 2019 | Faculty: Ms Rakhi Gupta | Class: B.Tech Mechatronics IV Semester

**Introduction:** The course is offered to understand Moral Values and Ethics in personal as well as professional life. It is basic requirement of every human to be a good human being and a good citizen. It further imparts him basics of corporate governance so as to empower him to work technically and professionally in any organization with confidence and conviction and at the same time with honesty & integrity.

**A.** Course Objectives: At the end of the course, students will be able to

BB1101.1	Define the meaning and relevance of Value and Ethics and apply in personal & professional life.
BB1101.2	Describe the importance of three Gunas for self-development, lifelong learning & growth.
BB1101.3	Find issues and identify solutions related to Public & Private Governance systems.
BB1101.4	Explain the relevance of Company's Act 2013 with reference to corporate world.
BB1101.5	Explain the role and key objectives of organizational governance in relation to ethics and law.
BB1101.6	Demonstrate the social & environmental responsibilities of corporate for sustainability, harmony and
	growth.

#### **B.** Program Outcomes and Program Specific Outcomes

#### PROGRAM OUTCOMES

- **Engineering knowledge**: Demonstrate and apply knowledge of Mathematics, Science and Engineering to classical and recent problems of electronic design & communication system.
- [PO.2]. Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design a component system, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environment.
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

#### PROGRAM SPECIFIC OUTCOMES

- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### C. Assessment Plan:

Criteria	Description	Maximum Marks
	Mid Sem Exam I (Close Book)	15
Internal Assessment	Mid Sem Exam II (Close Book)	15
(Summative)	In class Quizzes/ Assignments	20(Min 5 each)
	Students' Presentations	10
End Term Exam	End Term Exam (Close Book)	40
(Summative)		
	Total	100
Attendance	A minimum of 75% Attendance is requ	ired to be maintained by a student to be
(Formative)	qualified for taking up the End Semest	ter examination. The allowance of 25%
	includes all types of leaves including med	lical leaves.
Make up Assignments	Students who misses a class will have to	report to the teacher about the absence. A
(Formative)		n the day of absence will be given which
	has to be submitted within a week from t	he date of absence. No extensions will be
		cular day of absence will be marked blank,
		sence. These assignments are limited to a
	maximum of 5 throughout the entire seme	
Homework/ Home Assignment/	•	have to work in home, especially before a
Activity Assignment		s are not graded with marks. However, a
(Formative)		form these assignments with full zeal since
	the activity/ flipped classroom participation	on by a student will be assessed and marks
	will be awarded.	

#### D: Syllabus:

Values: Relevance of Value Education in day-to-day life. Mantra for success - Value, Moral and Ethics.

Determinants of human nature (Three Gunas) and its impact on human life.

**Relevance of traits** like Personality, Attitude, Behaviour, Ego, Character, introspection, Motivation, Leadership and 4 Qs with relevant Case Studies\*.

Governance: Understanding of Public and Private sector Governance systems; Courts & CAG.

Public Sector Governance: Need, relevance, stakeholders.

Private Sector Governance: Proprietary, Partnership, Company (Pvt Ltd & Ltd), Company' Act 2013, Board of Directors; its Roles and Responsivities. Regulatory bodies; its role in ethical governance.

Projects on PPP mode-relevance & prospects.

CSR: Relationship with Society, Philanthropy and Business strategy, CSR Policy, Triple Bottom Line

#### **Text / Reference Books:**

- 1. Professional Module of ICSI.
- 2. Ghosh B.N., Business Ethics & Corporate Governance, McGraw Hill.
- 3. Mandal S.K., Ethics in Business & Corporate Governance, McGraw Hill .
- 4. Ray C.K., Corporate Governance, Value & Ethics, Vaya Education of India
- 5. Chatterjee Abha, Professional Ethics, Oxford Publications.

#### \*Suggestive Case Studies:

- 1) Uphar Theatre Tragedy- Engineering Ethics
- 2) Bhopal Gas Tragedy- Operational Engineering Ethics
- 3) Satyam Case-Financial Reporting Ethics
- 4) Enron Case- Business Ethics
- 5) Neerav Modi Case- Financial Fraudulence cases

#### D. Lecture Plan:

Lec No	Topics	Session Outcome	Mode of Delivery	Correspo nding CO	Mode of Assessing the
1	Introduction: Values: Meaning & Relevance of value education	To acquaint and clear teacher's expectations and understand	Lecture	BB 1101.1	Outcome In class Quiz Mid Term I
		student expectations. Basics of Value Education			End Term Exam
2	Success: Meaning in perspective of morals & ethics	To understand the concept of success achieved with or without morals / ethics/ values	Lecture, case study	BB 1101.1	In class Quiz Mid Term I End Term Exam
3,4	Professional Ethics & ethical dilemmas Case study-Neerav Modi	To understand the role of professional ethics in the life & deal with dilemmas	Lecture	BB 1101.1	In class Quiz, assignment Mid Term I End Term Exam
5	Three Gunas and their relevance, Nature and kinds of value with examples	Understand basic traits in one's personality, its causes and relevance with value based living.	Lecture	BB 1101.2	In Class Quiz, Mid Term I End Term
6,7	Relevance of traits of individual like Personality, Attitude, Behaviour	To acquaint & develop positive traits of personality in oneself	Short stories, Lecture	BB 1101.2	Class Quiz assignment Mid Term I End Term
8.9	Ego, Character, introspection, Motivation	To acquaint & develop positive traits of personality in oneself and	Lecture Short	BB 1101.2	In Class Quiz Mid Term I

10,11	Leadership traits & 4Qs (PQ, IQ, EQ, SQ)	To realize importance of leadership and to imbibe in life	Lecture Short stories	BB 1101.2	In Class Quiz assignment Mid Term I End Term
12,13	Governance & its relevance Case studies- Bhopal Gas & Uphar Cinema	To acquaint with the concept of Governance	Lecture	BB 1101.3	In Class Quiz Mid Term II End Term
14	Public Sector Governance: Need, relevance, stakeholders	Understand various aspects of public sector governance	Lecture	ВВ 1101.3	Class Quiz, Mid Term II End Term
15	Public Finance, Audit & Control	Understand basics of Public Finance, Check & balance	Lecture Case study	BB 1101.3	Class Quiz, assignment Mid Term II End Term
16,17	Private Sector Governance, proprietary & partnership firms and corporate, PPP mode projects	Understand meaning of proprietary & partnership in a firm / company and perspective in PPP mode	Lecture Short stories	BB 1101.3 & 1101.4	Class Quiz Mid Term II End term
18, 19	Company' Act 2013 : Roles & Responsibilities of Directors & regulatory authorities	Explain various Regulations and practices of Corporate Governance internationally & understand key role of directors	Lecture	BB 1101.4	Class Quiz Mid Term II End Term

# Department of Mechatronics Engineering Lab Course Hand-out

Integrated Electronics Lab| MC 1431 | 1 Credits | 0 0 2 1

Session: Jan 19 - May 19 | Faculty: Dr Prabhat Ranjan/Mr. Kumar Gaurav | Class: B. Tech IV Sem

- **W. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to pursue research & development in industries or higher studies in field of chip design, PCB design, logic circuits, electronic circuitry etc. Offers hands-on experience on varied logic circuits and integrated chip testing boards.
- **X.** Course Outcomes: At the end of the course, students will be able to
- [1410.19]. Identify relevant information to supplement to the Digital System Design course.
- [1410.20]. To understand the basic digital circuits and to verify their operation
- [1410.21]. Construct basic combinational circuits and verify their functionalities
- [1410.22]. Apply the design procedures to design basic sequential circuits

### Y. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or <u>processes</u> that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in</u> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> <u>teams</u>, and in multidisciplinary settings

- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
  - **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
  - [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Z.** Assessment Plan:

Criteria	Description	Maximum Marks							
Internal Assessment (Summative)	Laboratory Sessions	60							
End Term Assesment (Summative)	Lab Exam Performance	40							
	Total	100							
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to qualified for taking up the Practical End Semester examination. The allowance 25% includes all types of leaves including medical leaves.								
Make up Assignments (Formative)		have to report to the teacher about the performed as a makeup experiment in the poratory exam							
Laboratory Guidelines	notebook. The experimental data should be of performance and the same should be tra	bservation book and a laboratory record be noted in the observation book on the day ansferred to the record notebook before the rethe lab without the observation book and led absent							

#### AA. Syllabus

Regulator using 78XX and LM 317.Digital circuit design, combinational circuits – Implementation of Boolean functions and Arithmetic circuits, Multiplexers and implementation of circuits using multiplexers, Decoders and implementation of circuits using decoders, code converters, display driver interfaces, ripple counters, shift registers and ring counters, synchronous counters.

# Department of Mechatronics Engineering Course Hand-out

Mechatronics Systems Elements | MC 1508 | 4 Credits | 3 | 0 4

Session: July 18 – Dec 18 | Faculty: Ashok Kumawat | Class: Core Subject

**DD. Introduction:** This course is offered by Department of Mechatronics Engineering as a core subject, targeting students who wish to pursue research & development in industries or higher studies in field of Mechatronics. The course focuses on key elements of mechatronics system such as system modelling, sensors, actuators and control algorithms.

#### **EE.** Course Objectives:

- [1410.23]. Discuss the basic elements of a mechatronics system.
- [1410.24]. Analyse different type of actuators such as relays, motors and their applications.
- [1410.25]. Understand the working and application of various sensors.
- [1410.26]. Design various type of signal conditioning systems for a mechatronics system.
- [1410.27]. Design and implementation of a control algorithm in a mechatronics system and enhance employability skills.

#### FF. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health</u>, <u>safety</u>, <u>legal</u>, <u>and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse

teams, and in multidisciplinary settings

- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- [PSO.1]. Apply\_the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### HH. Syllabus

Introduction of mechatronic systems, needs and benefits of mechatronics in manufacturing, Sensors and Transducers: Displacement Sensor Strain - Strain gauges, Force/Torque, Motion & Velocity sensors, Proximity and Range sensors – Eddy current sensor, ultrasonic sensor, laser interferometer transducer, Hall Effect sensor, inductive proximity switch, Light sensors, phototransistors, Flow sensors, laser Doppler anemometer, tactile sensors, micro-switch & reed switch, Piezoelectric sensors, vision sensor, Drives and Actuators: Solenoids, relays, diodes, Thyristors, TRIACS, BJT, FET, DC motor, Servo motor, BLDC Motor, AC Motor, stepper motors, Piezoelectric actuators, Shape memory alloys, Hydraulic & Pneumatic devices, Power supplies, valves, cylinder sequencing, Data Acquisition & Translation: Signal conditioning, Multiplexer, Pulse width Modulation, Signal Analysis, Linearization of data, Compensation, Signal Averaging, Fourier analysis, Data Presentation System: Display - Cathode ray oscilloscope, LED, LCD, Printers, Magnetic Recording. Controllers and Algorithms: PID controller and controller tuning.

## **II.** Lecture Plan:

Lecture No.	Topics	Session Outcome	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome
1,2	Introduction, Basic elements of MSE	To understand the basic elements of MSE	Lecture	1508.1	In Class Quiz Mid Term I End Term
3,4	Basics of Sensors and Transducers, Displacement Sensors	Understanding basics of sensors and working of displacement sensor	Lecture	1508.1 1508.3	In Class Quiz Mid Term I
5	Strain gauges	Analysis and application of stain gauge sensor	Lecture	1508.3	In Class Quiz End Term
6,7	Force/Torque measurement	Measurement methods of force/torque	Lecture	1508.3	Home Assignment End Term
8,9,10	Motion & Velocity sensors	Explain working of motion and velocity sensors	Lecture	1508.3	In Class Quiz End Term
11,12,13	Proximity and Range sensors,	Basics of proximity sensors and working of different type of sensors	Activity (Think Pair Share)	1508.3	Class Quiz Mid Term I End Term
14,15	Eddy current sensor,	Explain working of eddy current sensor	Lecture, Activity (Jigsaw)	1508.3	Class Quiz Mid Term 1 End term
16	ultrasonic sensor,	Describe the working and application of ultrasonic sensor	Lecture, Flipped Class	1508.3	Home Assignment Class Quiz Mid Term 1 End Term
17	laser interferometer transducer	Describe the working and application of laser interferometer transducer	Lecture, Activity (Think Pair Share)	1508.3	Class Quiz Mid Term 1 End Term
18	Hall Effect sensor,	Discuss the working of hall effect sensor	Lecture	1508.3	Class Quiz Mid Term I End Term
19,20	Light sensors	Discuss about different type of light sensors	Lecture	1508.3	Class Quiz End Term
21,22	Flow sensors, laser Doppler anemometer	Explain about flow sensors	Lecture	1508.3	Class Quiz Mid Term II End Term
23,24	tactile sensors	Application and working of tactile sensor	Lecture, Activity	1508.3	Class Quiz Mid Term II End Term
25,26	Piezoelectric sensors,	Analysis and working of piezoelectric sensor	Lecture, Activity	1508.3	Class Quiz Mid Term II End Term
27	vision sensor	Describe vision sensors	Lecture	1508.3	Class Quiz Mid Term II End Term
28,29	Relays, Solenoids,	Explain working of relays and solenoid	Lecture	1508.2 1508.1	Class Quiz Mid Term II End Term
30,31	diodes, BJT, FET, Thyristor, TRIAC	Describe the basics of solid state devices	Lecture	1508.1	Class Quiz End Term

32,33	DC motor	Explain working of dc motors	Lecture	1508.2	Class Quiz End Term
34	Servo motor	Modelling and working of servo motor	Lecture	1508.2	Class Quiz Mid Term II End Term
35	BLDC Motor	Describe working of BLDC motor	Lecture	1508.2	Class Quiz End Term
36,37	AC Motor	Explain working of AC motors	Lecture	1508.2	Class Quiz End term
38,39	stepper motors	Explain application and working of stepper motor	Lecture	1508.2	Class Quiz Mid Term II End Term
40,41	Piezoelectric actuators	Application of piezoelectric actuator	Lecture	1508.2	Class Quiz Mid Term II End Term
42	Shape memory alloys	Describe shape memory alloy	Lecture	1508.1	Class Quiz Mid Term II End Term
43,44	Hydraulic & Pneumatic devices, valves	Basics of valves	Lecture	1508.1	Class Quiz Mid Term II End Term
45	Power supplies	Basics of power supplies	Lecture	1508.1	Class Quiz
46	Basics of Signal conditioning, Current Feedback Operational amplifiers	Analysis of CFOA	Lecture	1508.4	End Term
47	Multiplexer, Pulse width Modulation	Describe PWM	Lecture	1508.4	Class Quiz
48	Signal Analysis, Linearization of data	Analysis to linearize the data	Lecture	1508.4	Class Quiz End Term
49	Compensation, Signal Averaging, Fourier analysis	Analysis of signals	Lecture	1508.4	Class Quiz
50	Data Presentation System: Display - Cathode ray oscilloscope, ,	Explanation of CRO	Lecture	1508.1 1508.5	Class Quiz Mid Term II End Term
51	LED, LCD Printers, Magnetic Recording	Explain the working of data presenting systems	Lecture	1508.1	Class Quiz End Term
52	PID Controller and Controller parameter tuning	Analysis and tunning of PID controller	Lecture	1508.5	Class Quiz End Term

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Microprocessors and Microcontrollers MC 1509 | 4 Credits | 3 1 0 4

Session: July 18 – Dec 18 | Faculty: Kumar Gaurav | Class: Dep. Core (V Sem)

- **KK.Introduction:** This course is offered by Dept. of Mechatronics Engineering as a department core, targeting students who wish to pursue research & development in industries or higher studies in field of systems built around microprocessors and microcontrollers. It is a step-by-step walk through basics and up-to design and development phase of the project based on the microprocessors and microcontrollers. Programming in assembly as well as Embedded C further add interest and strengthen the course which is of utmost need to program these processors/controllers. Microprocessors and microcontrollers are also used to control traffic lights, appliances, motion control, position control, servo control, elevators, automation, electric car and control of AC/DC machines. It is also used in measurement and display of electrical and physical quantities such as voltage, current, frequency, phase angle, stress, strain etc. In a nutshell this course will introduce the world of automated systems driven by microprocessors and microcontrollers.
- LL. Course Objectives: At the end of the course, students will be able to
- [1410.28]. Assess and solve basic binary math operations using the microprocessor and explain the microprocessor's and Microcontroller's internal architecture and its operation within the area of manufacturing and performance.
- [1410.29]. Apply knowledge and demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor and microcontroller.
- [1410.30]. Compare accepted standards and guidelines to select appropriate Microprocessor (8085 & 8086) and Microcontroller to meet specified performance requirements.
- [1410.31]. Analyse assembly language programs; select appropriate assemble into machine a cross assembler utility of a microprocessor and microcontroller.
- [1410.32]. Design electrical circuitry to the Microprocessor I/O ports in order to interface the processor to external devices.
- [1410.33]. Evaluate assembly language programs and download the machine code that will provide solutions to real-world control problems and enhance employability skills.

## MM. Program Outcomes and Program Specific Outcomes

- [PO.61]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.62]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.63]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.64]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.65]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

- [PO.66]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.67]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.68].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.69]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.70].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.71]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.72]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### NN. Assessment Plan:

Criteria	Description	Maximum Marks						
	Sessional Exam I (Close Book)	15						
Internal Assessment	Sessional Exam II (Close Book) 15							
(Summative)	In class Quizzes and Assignments,	30						
	mini projects, Activity feedbacks							
	(Accumulated and Averaged)							
End Term Exam	End Term Exam (Close Book)	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is requi	ired to be maintained by a student to be						
(Formative)	qualified for taking up the End Semest	ter examination. The allowance of 25%						
	includes all types of leaves including med	lical leaves.						
Make up Assignments	Students who misses a class will have to	report to the teacher about the absence. A						
(Formative)	makeup assignment on the topic taught o	n the day of absence will be given which						
	has to be submitted within a week from t	he date of absence. No extensions will be						
	given on this. The attendance for that particular day of absence will be marked blank,							
	so that the student is not accounted for absence. These assignments are limited to a							
	maximum of 5 throughout the entire seme	ester.						

Homework/ Home Assignment/ Mini
Project/Activity Assignment
(Formative)

There are situations where a student may have to work in home on a given problem. However, a student is expected to participate with full zeal and perform these assignments (Individually/Team) with graded marks and show the outcome.

## OO. Syllabus

MICROPROCESSORS AND MICROCONTROLLERS: Introduction to microprocessor, History of Microprocessors, General block diagram of 8085, & 8086 with their instruction set. Introduction to microcontroller, History of Micro controllers, Embedded versus External memory devices, Microcontroller survey, CISC and RISC Microcontrollers, Harvard and von Neumann Architecture, Commercial Micro controller Devices, Introduction to 8051 family, History of 8051, Architectural features of 8051, Programming model. Pin details, I/O Ports, Power down operation, Addressing Mode, Instruction set of 8051 and Programming, Programming the 8051 resources, Counters, Timers, Serial Interface, Multiprocessor communication and Interrupts, Measurement of frequency, period and pulse width of a signal, Peripheral Interfacing- memory interfacing, Key board, LCD, stepper motor, Seven Segment Display, Digital to analog Converter, Analog to Digital converters, The 8051 based system design- case studies, Traffic light control, and Washing machine control, mining problem, Turbine monitor, Introduction to PIC Microcontrollers- Architectural and Peripheral features, ALU, CPU, Memory map, clock, pipelining, addressing and I/O ports.

#### PP. Text Books

- T1. K. Kant, *Microprocessors and Micro controllers*, PHI learning publications, 2007.
- T2. M. A. Mazidi, J. G. Mazidi, & R. D. Mckinlay, 8051 Microcontroller and Embedded Systems Using Assembly and C, Pearson Education, 2010.

## **QQ. Reference Books**

- R1. A.V. Deshmukh, Micro controllers- Theory and Applications, Tata McGraw Hill, New Delhi, 2008.
- R2. J. A. Kenneth, *The 8051 Microcontroller Architecture, programming and applications*, Penram International Publications, Mumbai, 2008.
- R3. PIC micro Mid-Range MCU Family Reference Manual.

## RR. Lecture Plan:

Lec No	Topics	Session Outcome	Mode of Delivery	Corresponding CO
1	Introduction to class about course	To acquaint and clear teachers expectations and understand student expectations	Lecture	NA
2	Introduction to microprocessor, History of microprocessors	Explain need of microprocessors/microcontrollers in daily life	Lecture	1509.1
3	General block diagram of 8085 & 8086	Discussion about different components of a computing system	Lecture	1509.1
3	Addition and subtraction in different Number system	Recall basics of number system, binary, decimal, hexadecimal etc.	Lecture	1509.1
4	Difference b/w a microprocessor and microcontroller	Difference between the two	Lecture	1509.1
5,6,7	Pin Diagram of 8085 microprocessor	Details pin diagram discussion	Lecture	1509.2 1509.5
8,9,10	Internal architecture of 8085	Register array description	Lecture	1509.6
11,12	Comparison of 8085 and 8086 and introduction to assembly level language	Basics of assembly level programming	Lecture	1509.2
13,14, 15	Instruction set of 8085	Arithmetic, logical, branch instructions	Lecture	1509.2 1509.3
16,17	Assembly level Programming for 8085	Practice problems		
18	CISC and RISC Microcontrollers, Harvard and von Neumann Architecture,	Difference between the two	Lecture	1509.2 1509.3
19	Interrupts in 8085	Discussion and problems		1509.3
20	Commercial Micro controller Devices	Microcontroller, discussion	Lecture	1509.2
21,22	Introduction to 8051 family, History of 8051	Discussion about other features of 8051	Lecture	1509.4
23,24,25,26	Architectural features of 8051	Details about architectural features and their interconnect	Lecture	1509.4
27	Programming model	Register array description	Lecture	1509.4 1509.3
28,29	Pin details, I/O Ports, Power down operation	Working features	Lecture	1509.4 1509.3
30	Addressing Mode of 8051	Category of instructions	Lecture	1509.4
31,32,33	Instruction set of 8051	Assembly level opcode details	Lecture	1509.4
34,35,36	Programming in 8051	Programming practice	Lecture	1509.5
37,38	Counters	Counter importance and its programming procedure	Lecture	1509.6 1509.5
39,40	Timers	Timer importance and its programming procedure	Lecture	1509.6 1509.3
41, 42	Serial Interface	Serial communication and its programming	Lecture	1509.2 1509.1
43	Measurement of frequency, period and pulse width of a signal,	Concept of frequency and pulse width with programming	Lecture	1509.4
44,45,46	Multiprocessor communication and Interrupts,	Interrupts in 8051 microcontroller and their importance	Lecture	1509.5 1509.3

47	The 8051 based system design- case studies, and Washing machine control	Practical application	Lecture	1509.6
48	Traffic light control,	Practical application	Lecture	1509.6

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

Department of Mechatronics Engineering Course Hand-out

Sensor and control lab| MC 1533 | 1 Credits | 0 0 2 1

Session: July 19 – Nov 19 | Faculty: Nikhil Vivek Shrivas | Class: A. Tech VSem

**Introduction:** This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to pursue research & development in industries or higher studies in field of Mechatronics Engineering, including electrical drive control and power electronics. This lab consists of different types of industrial grade proximity sensors and hydraulic actuators with different accessories which provides learning platforms enhancing knowledge about the industrial automation and there applications. Also a portable, comprehensive and practical way to learn Technology has also been provided. More than 50 experiments can be performed with the help of sensors and actuators provided by the Bosch-Rexroth. The sensor part consist of comprises of sensors and transducers which provide the fundamental knowledge of sensing light, pressure, temperature, IR and many more non electrical entities.

The hydraulic part of this lab consists of different hydraulic actuators, control valves for displacement and direction control (mechanical and electromechanical). Different hydraulic circuits can be formed and tested with or without the application of PLC. The industrial automation can be visualized in this lab.

**Course Outcomes:** At the end of the course, students will be able to

[MC1533.1] Understand the principle of operation of various sensors and their behaviour for different types of industrial material.

[MC1533.2] Implementation of different sensors for various applications in Industrial automation.

[MC1533.3] Design the basic control system models and verify it mathematically.

[MC1533.4] Apply different input conditions and observe the response of various control system models using Matlab Simulink Environment.

**Program Outcomes and Program Specific Outcomes** 

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
  - [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern

engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health</u>, <u>safety</u>, <u>legal</u>, and <u>cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills, and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **Assessment Plan:**

Criteria	Description	Maximum Marks							
Internal Assessment (Summative)	Laboratory Sessions	60							
End Term Assesment (Summative)	Lab Exam Performance	40							
	Total	100							
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking up the Practical End Semester examination. The allowance of 25% includes all types of leaves including medical leaves.								
Make up Assignments (Formative)		have to report to the teacher about the performed as a makeup experiment in the poratory exam							
Laboratory Guidelines	Students are expected to maintain an observation book and a laboratory record notebook. The experimental data should be noted in the observation book on the day of performance and the same should be transferred to the record notebook before the next lab. No students are allowed to enter the lab without the observation book and record book and attendance will be marked absent								

## **Syllabus**

Study of Infrared Sensing and design of IRsensor using photodiode and TSOP. Experiment on optical sensors. StudyofH-Bridge&designusingTransistors. Implementation of motor drivercircuit using LM293. Study of PWM (Pulse Width Modulation) & its use to control the speed of aDCmotor. StudyofStepperMotor&itscontrolcircuit. StudyofServoMotor&itscontrolcircuit. Study offeedback, feedforward, and ratio controller. Study of inverted pendulum.

## MANIPAL UNIVERSITY JAIPUR

School of Automobile, Mechanical and Mechatronics Department of Mechanical Engineering

#### Course Hand-out

Business Management | BB 1540 | 3 Credits | 3 0 0 3

Session: July 2018 – December 2018 | Faculty: Mr. Arun Gautam | Class: B. Tech. V Semester

**A. Introduction:** This course is offered by Department of Business Administration as compulsory subject, targeting

Engineering students to give concept of keeping organizations healthy and viable in today's global competitiveness. A manager links an enterprise with changing environment. Managerial functions are essentially the same everywhere. Yet to get success, managers will have to acquire a global outlook and apply the principles, concepts and theories in an open perspective.

- **B.** Course Outcomes: At the end of the course, students will be able to-
- [BB1540.1] Explain knowledge in the field of organizational management and internal organization structure required for managing an enterprise.
- [BB1540.2] Describe management, motivation and leadership for developing managerial skills.
- [BB1540.3] gain knowledge for starting a small scale unit.
- [BB1540.4] Distinguish knowledge on case studies.
- [BB1540.5] classify the importance of Management Information System.

## C. Program Outcomes and Program Specific Outcomes

- **[PO.1]. Engineering Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- [PO.2]. **Problem Analysis:** Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- [PO.3]. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- [PO.4]. Conduct investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
- [PO.5]. Modern Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an under standing of the limitations.
- **[PO.6]. The Engineer and Society:** Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.

- **[PO.7]. Environment and Sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
- [PO.8]. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
- **[PO.9]. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
- [PO.11]. **Project Management and Finance:** Demonstrate knowledge and understanding of engineering and management principles and apply these to owners own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long Learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## PROGRAM SPECIFIC OUTCOMES:

- [PSO.1]. Modelling & Analysis: Model and analyse mechanical engineering components using advanced software
- [PSO.2]. Alternative fuels: Analyse performance of I. C. engines attributed to alternate fuels
- [PSO.3]. Synthesis and Manufacturing: Synthesize Advance Materials and Manufacture components and spares.

#### D. Assessment Plan:

Criteria	Description	Maximum Marks					
	Sessional Exam I	15					
Internal Assessment	Sessional Exam II	15					
(Summative)	In class Quizzes and Assignments, Activity feedbacks (Accumulated and Averaged)	30					
End Term Exam (Summative)	End Term Exam	40					
	Total	100					
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking up the End Semester examination. The allowance of 25% includes all types of leaves including medical leaves.						
Make up Assignments (Formative)	Students who misses a class will have to report to the teacher about the absence. A makeup assignment on the topic taught on the day of absence will be given which has to be submitted within a week from the date of absence. No extensions will be given on this. The attendance for that particular day of absence will be marked blank, so that the student is not accounted for absence. These assign ments are limited to a maximum of 5 throughout the entire semester.						
Homework/ Home Assignment/ Activity Assignment (Formative)		ks are not graded with marks. However, a form these assignments with full zeal since					

## E. SYLLABUS

Meaning and definition of an organization, Necessity of Organization, Principles of Organization, Formal and Informal Organizations. Management: Functions of Management, Levels of Management, Managerial Skills, Importance of Management, Models of Management, Scientific Management, Forms of Ownership, Organizational Structures, Purchasing and Marketing Management, Functions of Purchasing Department, Methods of Purchasing, Marketing, Functions of Marketing, Advertising. Introduction, Functions of Personal Management, Development of Personal Policy, Manpower Planning, Recruitment and Selection of manpower. Motivation – Introduction, Human needs, Maslow's Hierarchy of needs, Types of Motivation, Techniques of Mo tivation, Motivation Theories, McGregor's Theory, Herzberg's Hygiene Maintenance Theory. Leadership - Introduction Qualities of a good Leader, Leadership Styles, Leadership Approach, Leadership Theories. Entrepreneurship – Introduction, Entrepreneurship Development, Entrepreneurial Characteristics, Need for Promotion of Entrepreneurship, Steps for establishing small scale unit. Data and Information; Need, function and Importance of MIS; Evolution of MIS; Organizational Structure and MIS, Computers and MIS, Classification of Information Systems, Information Support for functional areas of management.

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Control Systems | MC1507 | 4 Credits | 4 0 0 4

Session: July 18 – Nov18 | Faculty: Dr. Ajay Kumar | Class: Core Subject

- **A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as a Program Elective. This course covers the analysis of linear systems and its stability using various techniques.
- **B.** COURSE OUTCOMES: At the end of the course, students will be able to
- [ME1507.1] Describe the mathematical model of a system and understand the methods of representation of systems and to design their transfer function models.
- [MC1507.2] Translate the Mechanical System to analogous Electrical System.
- [MC1507.3] Describe feedback control in control systems.
- [MC1507.4] Analyze the time response of systems and steady state error analysis and Interpret and differentiate the response of the different order systems for standard test input signals.
- [MC1507.5] Demonstrate the methods of basic control system design, including time and frequency response. Analyze and test MATLAB programs to check the system stability to enhance employability skills

## C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an Engineering specialization to the solution of complex engineering problems.
- [PO.2].Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching Substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3].Design/development of solutions: Design solutions for complex engineering problems and design system Components or processes\_that meet the specified needs with appropriate consideration for the public health and Safety, and the cultural, societal, and environmental considerations.
- [PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including Design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid Conclusions.
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the Limitations.
- [PO.6].The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, Safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering Practice
- [PO.7]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal

- and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the Engineering practices
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.10].Communication: Communicate effectively on complex engineering activities with the engineering

  Community and with society at large, such as, being able to comprehend and write effective reports and design

  Documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and Management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, Power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

## **D.** Assessment Rubrics:

Criteria	Description	Maximum Marks						
	Sessional Exam I (Closed Book)	15						
Internal Assessment	Sessional Exam II (Closed Book)	15						
(Summative)	In class Quizzes and Assignment on	25						
	MATLAB for designing any system							
	Attendance	5						
End Term Exam	End Term Exam (Closed Book)	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is required to be maintained by a student to							
(Formative)	be qualified for taking up the End Semester examination. The allowance of							
	25% includes all types of leaves included	ding medical leaves.						
Make up Assignments	Students who misses a class will har	ve to report to the teacher about the						
(Formative)	absence. A makeup assignment on the	topic taught on the day of absence will						
	be given which has to be submitted w	ithin a week from the date of absence.						
	_	he attendance for that particular day of						
		hat the student is not accounted for						
	<del>-</del>	ed to a maximum of 5 throughout the						
	entire semester.							
Homework/ Home Assignment/		may have to work in home. Although						
Activity Assignment	these works are not graded with marks. However, a student is expected to							
(Formative)		nents with full zeal since the activity						
		will be assessed and marks will be						
	awarded.							

## E. SYLLABUS:

Block Diagrams and Signal flow graph: Transfer function, Block Diagram, Simplification of systems, Signal flow graphs, Gain formula, State diagram, Transfer function of discrete data systems (PTF), Zero order hold; System modeling: Modeling of electrical and Mechanical Systems (translational & Rotational), System equations, its electrical equivalent (analogous) networks; Time domain analysis: Stability, Routh-Hurwitz criterion, time response for Continuous data systems, type and order of systems, Steady state error for linear Systems, Unit step response for second order systems, Root locus properties and construction; Frequency domain analysis: Introduction, second order prototype system, Bode diagram, Gain and Phase margins, Nyquist stability criterion; Compensators and controllers: Proportional, Integral, PI, PD and PID controllers, Lead, Lag and Lead-Lag compensators; State space representation: Stability Analysis, State transition matrix, Eigen values, Controllability and Observability.

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Automobile Engineering Course Hand-out

Signals and systems | MC1550 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 19 | Faculty: Shambo Roy Chowdhury | Class: Prog. Elective

- **TT.Introduction:** Signal processing is an extremely important tool in a wide variety of engineering domains. This course is introduced in mechatronics course to provide the basic concepts and theory of analog and digital signal processing. The course is intended to impart knowledge on signal transformation techniques used processing and modelling of signals and systems. The prerequisites are calculus, basics of complex numbers, and some exposure to differential equations. Prior exposure to the fundamentals of circuits for electrical engineers or fundamentals of dynamics for mechanical engineers is helpful but not essential.
- UU. Course Outcomes: At the end of the course, students will be able
- [1410.34]. To classify different types of signals and perform basic time domain operations on them
- [1410.35]. To perform time and frequency domain transformations on various signal types
- [1410.36]. To do basic signal processing tasks such as filtering and stability analysis
- [1410.37]. To implement and verify signal transformation algorithms using software tools in MATLAB and python
- [1410.38]. To interpret research problems with knowledge of signals and systems

## **VV. Program Outcomes and Program Specific Outcomes**

- **[PO.1]. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- [PO.2]. Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **[PO.3]. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **[PO.4]. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **[PO.5].** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **[PO.7]. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **[PO.8]. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices.
- [PO.9]. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

- **[PO.10]. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **[PO.11]. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### XX. Syllabus

Introduction to signals and systems: Definitions, Overview of specific systems, Classification of signals, Basic operations on signals, Elementary signals and functions, Systems viewed as interconnections of operations, properties of systems. Time domain representations for linear time-invariant systems: Introduction, Convolution: Impulse response representation for LTI systems, properties of the impulse response representation for LTI systems, Differential and difference equation representations for LTI systems, Block diagram representations. Fourier representation for signals: The discrete-time Fourier series, continuous-time periodic signals: The Fourier series, Discrete-time non-periodic signals: The discrete-time Fourier transform, continuous-time non-periodic signals: The Fourier transform, properties of Fourier representations, Discrete-time periodic signals, Fast Fourier transform. Z-transform and its applications: Review of z-transform, unilateral z-transform, solution of difference equations, Analysis of LTI system in z-domain-system function, pole-zero analysis, stability

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Material Science | MC 1551 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 18 | Faculty: Varun J | Class: Program Elective-I (V Semester)

- **AAA. Introduction:** This course is offered by Dept. of Mechatronics Engineering as an Program Elective, targeting students who wish to explore why engineering materials constitute foundation of technology, it's not only necessary but a must to understand how materials behave like they do and why they differ in properties. Understanding structure, properties, processing, and performance of different materials and selecting a material for a given use based on considerations of cost and performance.
- **BBB.** Course Objectives: At the end of the course, students will be able to
  - MC1551.1 Develop the basic fundamental of material science and engineering
  - MC1551.2 <u>Discover</u> the different classes of material their properties, structures and imperfections present in them.
  - MC1551.3 <u>Understanding</u> the behavior of materials, particularly structure-property correlation.
  - MC1551.4 <u>Identify</u> the limits of materials and the change of their properties with use.
  - MC1551.5 Value the use the material for different application and their processing.
- **CCC.** Program Outcomes and Program Specific Outcomes
- [PO.73]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.74]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.75]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.76]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.77]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.78]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health,</u> safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- [PO.79]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.80]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.81]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings

- [PO.82]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.83]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.84]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Manufacturing Process| MC1552 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 18 | Faculty: Dr. Manish Rawat | Class: Prog. Elective

**HHH.** Introduction: This course is offered by Dept. of Mechatronics Engineering as a Prog. Elective, targeting students who wish to pursue research& development in industries or higher studies in field of smart machining. Manufacturing involves the transformation of raw materials from their initial form into finished, functional products. Man achieves this transformation by numerous methods utilising a variety of processes each designed to perform a specific function in the transformation process. Inherent in the design and operation of processes must be a knowledge of the properties of engineering materials and specific methods to utilise these properties during the various stages of the manufacturing process. Because of the competitive nature of the manufacturing industry, engineers are constantly striving to create new materials, better transformation methods and processes which are cheap to operate, efficient, fast and accurate. This course provides an introductory study of manufacturing processes and is complemented by further studies at higher levels of the program. Various material forming and cutting processes are considered, and theoretical knowledge is reinforced by practical demonstrations and videos.

#### III. Course Objectives: At the end of the course, students will be able to

- [1410.39]. Examine the principles associated with basic operations involving the casting, machining and welding of engineering materials.
- [1410.40]. Interpret the advantages and limitations of each process and its influence on the properties of the material in the finished component;
- [1410.41]. Interpret the geometry of tooling used on various metal cutting machines;
- [1410.42]. Analyse the practical applications of a variety of forming and machining processes
- [1410.43]. Analyse the effects of heat, lubrication and various cutting tool materials on the metal cutting process.

#### **JJJ. Program Outcomes and Program Specific Outcomes**

- [PO.1] Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2] Problem analysis: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3] Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.4] Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- [PO.5] Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- [PO.6] The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice

- [PO.7] Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9] Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10]** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12] Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

(Formative)		n the day of absence will be given which
		he date of absence. No extensions will be
		cular day of absence will be marked blank,
		sence. These assignments are limited to a
	maximum of 5 throughout the entire seme	
Homework/ Home Assignment/		have to work in home, especially before a
Activity Assignment		s are not graded with marks. However, a
(Formative)		orm these assignments with full zeal since
	the activity/ flipped classroom participation	on by a student will be assessed and marks
	will be awarded.	

#### LLL. Syllabus

Metal Casting Process: Classification of metal casting, Pattern Allowances, Molding Materials, Gating system design. Casting defects: Causes and remedies, Inspection of castings Introduction to Machine Tools: Classification of machine tool, Mechanics of Metal Cutting: Principles of metal machining, cutting tools and tool materials, tool signature, mechanics of chip removal, tool wear, tool life, economics of machining. Metal Joining Processes: Principle of welding, soldering, Brazing and adhesive bonding. Classification of welding and allied processes. Resistance welding: Spot, Projection and seam welding process, Atomic hydrogen, ultrasonic, Plasma and laser beam welding, Electron beam welding, and special welding processes e.g. TIG, MIG, friction and explosive welding. Metal Shaping and Forming: Metal working, Elastic and plastic deformation, Hot and cold working, Rolling, Principle and operations, Forging, Forging operations, extrusion, Wire and tube drawing processes. Forging: Principle of forging tool design, Cold working processes: Shearing, Drawing Squeezing, Blanking, Piercing, deep drawing, Coining and embossing.

#### MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Lab Course Hand-out

Microprocessors and Microcontroller Lab| MC 1532 | 1 Credits | 0 0 2 1

Session: July 18 - Nov 18 | Faculty: Mr. Kumar Gaurav | Class: B. Tech V Sem

- **QQQ. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to pursue research & development in industries or higher studies in field of Automation Engineering, including Embedded systems, Robotics, and other advanced systems. Offers hands-on experience on varied Microprocessors and Microcontrollers testing boards.
- **RRR.** Course Outcomes: At the end of the course, students will be able to
- [1410.44]. Identify relevant information to supplement to the Microprocessor and Microcontroller course.
- [1410.45]. Set up programming strategies and select proper mnemonics and run their program on the training boards.
- [1410.46]. Practice different types of programming keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.
- [1410.47]. Develop testing and experimental procedures on Microprocessor and Microcontroller and analyse their operation under different cases.
- [1410.48]. Prepare professional quality textual and computational results, incorporating accepted data analysis and synthesis methods, simulation software, and word-processing tools to enhance employability skills

### SSS. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice

- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
  - **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
  - [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

TTT. Assessment Plan:

Criteria	Description	Maximum Marks						
Internal Assessment (Summative)	Laboratory Sessions	60						
End Term Assesment (Summative)	Lab Exam Performance	40						
	Total	100						
Attendance (Formative)		ired to be maintained by a student to be Semester examination. The allowance of g medical leaves.						
Make up Assignments (Formative)		have to report to the teacher about the performed as a makeup experiment in the oratory exam						
Laboratory Guidelines  Students are expected to maintain an observation book and a lal notebook. The experimental data should be noted in the observation of performance and the same should be transferred to the record note next lab. No students are allowed to enter the lab without the observation of performance and an attendance will be marked absent								

Introduction to 8085 trainer kit and instruction set, Programming for Arithmetic and Logic operations, Array sorting, Code conversion, generate & sum of Fibonacci series, display of message. Introduction to 8051 simulation software and familiarization of 8051 instruction set, Arithmetic and Logic related programs, Array handling and code conversion programs, I/O port and Timer/Counter programming, Programming using 8051 trainer kit in serial mode, DAC

Interfacing Programs, Keyboard and LCD Interface, Analog to Digital converter Interface, Seven segment Interfacing Programs, Logic Controller Interfacing Programs, Stepper motor Interfacing Programs, DC motor interface.

Pneumatics & Hydraulics Systems | MC 1605 | 3 Credits | 3 0 0 3

Session: Jan 19 – May 19 | Faculty: Varun J | Class: Core (VI Semester)

- **XXX. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a department core course, targeting students who wish to pursue research& development in industries or higher studies in field of Automation. Pneumatics has long since played an important role as a technology in the performance of mechanical work. It is also used in the development of automation solutions. In the majority of applications compressed air is used for one or more of the functions such as to determine the status of processors (sensors), information processing (processors), switching of actuators by means of final control element and carrying out work (actuators). To be able to control machinery and installations necessitates the construction of generally complex logic interconnections of statuses and switching conditions. This occurs as the result of the interaction of sensors, processors, control elements and actuators in pneumatic or partly pneumatic systems.
- YYY. Course Objectives: At the end of the course, students will be able to

[MC1605.1] Describe the importance of fluid power and depict the use of different valves and circuit for achieving desired motion in automation.

[MC1605.2] Interpret and illustrate the working of valves or designing a circuit to enhance employability skills.

[MC1605.3] Experiment using different valves for circuit, analyse the outcome motion of circuit and correlate with working of valves, calculate motion of actuators as per time and modify the circuit using different valves to control the final actuator motion.

[MC1605.4] Recognize different circuit designing techniques and judge the best way to achieve the output with circuit for a particular condition of automation.

[MC1605.5] Recall different automated motion for different types of applications, choose and test various valves for the circuit developed to imitate actual motion required for automation.

### **ZZZ.** Program Outcomes and Program Specific Outcomes

- [PO.85]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.86]. Problem analysis: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.87]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.88]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.89]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.90]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.91]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- [PO.92]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.93]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.94].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.95]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.96]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **BBBB.** Syllabus

Introduction to Fluid Power: Hydraulics and Pneumatics, Fluid power and fluid transport system, advantages, disadvantages and applications. Components: functions and properties of Hydraulic fluid, Pascal's law application, hydraulic power, siphon effect. Hydraulic components: losses in valves and fittings, hydraulic circuit analysis, pumping theory, classification of pumps, Volumetric displacement and flow rate for gear, vane and axial piston pump, performance and selection. Cylinder: construction and mountings, force, velocity and power, cylinder load due to moving weight and cylinder loadings. Motors: types, torque, power and flow rate, performance. Valves: DC valves, check, pilot, 3-way, 4-way, manually, mechanically and solenoid actuated valves, shuttle valve, Twin pressure valves, Shuttle valves ,Servo valves, Pressure control valves Pressure relief valve, pressure reducing valve, pressure compensation valve, symbols of valves. Hydraulic Circuits: with different components and objectives, hose size calculations. Pneumatics: Compressor types, capacity ratings, sizing of receiver, FRL, sizing of valves, actuators- cylinders and motors. Circuits: design considerations, air losses in pipe lines. Pneumatic circuit analysis. Circuit design: Motion diagram, Cascading method, Karnaugh –Veitch method, electrical controls in pneumatic circuits.

#### MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

Department of Mechatronics Engineering Course Hand-out

Electrical Drives & Machines | MC 1608 | 3 Credits | 3 0 0 3

Session: Jan 19 - May 19 | Faculty: Ashok Kumar Kumawat | Class: VI Semester

**Introduction:** This course is offered by Department of Mechatronics Engineering as a core subject, targeting students who wish to pursue research & development in industries or higher studies in field of power electronics and drive control. The course focuses on providing an introduction of different power semiconductor devices, different kind of power modulators and control mechanism for AC and DC machines. Students are expected to have background knowledge on drive control using power electronic circuits for a better learning.

Course Objectives: At the end of the course, students will be able to

- MC 1608.1 Describe the construction and working operation of power electronic devices such as SCR, IGBT etc.
- MC 1608.2 Analysis and working operation of various types of converters such as dc-dc, ac-ac, ac-dc, dc-ac.
- MC 1608.3 Ability to understand the components of electrical drives and dynamics of electrical drives.
- MC 1608.4 Develop design knowledge on how to design the speed control loops for DC Motor and AC motor and hence develop employability skills.
- MC 1608.5 Ability to develop about selection criteria of motor power ratings.
- MC 1608.6 To learn about working and applications of special motors.

#### **Program Outcomes and Program Specific Outcomes**

- **[PO.1]. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.6].** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to professional ethics\_and responsibilities and norms of the

engineering practices

- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Assessment Plan:**

#### MANIPAL UNIVERSITY JAIPUR

School of Automobile, Mechanical and Mechatronics

# Department of Mechatronics Engineering Lab Course Hand-out

Pneumatics & Hydraulics Lab | MC1633 | 1 Credits | 0 0 2 1

Session: 2018-2019 | B.Tech. VI Semester

Introduction Hydraulic and pneumatic systems are both widely used in stationary (industrial) and off-highway (mobile) equipment. Hydraulic systems are widely used when heavy force or torque is involved, such as lifting loads weighing several tons, crushing or pressing strong materials like rock and solid metal, and digging, lifting, and moving large amounts of earth. And although pneumatics is capable of transmitting high force and torque, it is more widely used for fast-moving, repetitive applications, such as pick-and-place operations, gripping, and repetitive gripping or stamping. In both cases, electronic controls and sensors have been implemented into fluid power systems for the last few decades. These electronics make hydraulic and pneumatic systems faster, more precise and efficient, more reliable, and allow them to be tied into statistical process control and other factory and mobile equipment control networks.

- **A.** Course Outcomes: At the end of the course, students will be able to
- [MC1633.1] Specifying Pneumatics valves and their usage criteria used in automation
- [MC1633.2] Apply knowledge using the pneumatic circuits in different constraints to operate actuators in various scenarios.
- [MC1633.3] Understand the advance circuit concepts of pneumatics and hydraulics to solve industrial problems and enhance employability skills.
- [MC1633.4] Analyze the information required to make decisions about usage of valves in various manufacturing environments and industries thus enhancing entrepreneurial skills.

### **B.** Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- **[PO.2].** Problem analysis: <u>Identify</u>, <u>formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **[PO.3].** Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research methods including <u>design of experiments</u>, <u>analysis and interpretation of data</u>, and synthesis of the information to provide valid conclusions
- **[PO.5].** Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> <u>engineering and IT tools</u> including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7].** Environment and sustainability: Understand the <u>impact of the professional engineering solutions in</u> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- **[PO.8].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9].** Individual and team work: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12].** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### C. Assessment Plan:

Criteria	Description	Maximum Marks				
Internal Assessment (Summative)	Laboratory Sessions	60				
End Term Assesment (Summative)	Lab Exam Performance	40				
	Total 100					
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking up the Practical End Semester examination. The allowance of 25% includes all types of leaves including medical leaves.					
Make up Assignments (Formative)		Il have to report to the teacher about the be performed as a makeup experiment ore the laboratory exam				
Laboratory Guidelines	Students are expected to maintain an observation book and a laboratory record notebook. The experimental data should be noted in the observation book on the day of performance and the same should be transferred to the record notebook before the next lab. No students are allowed to enter the lab without the observation book and record book and attendance will be marked absent					

#### D. SYLLABUS

Basic Pneumatics: Operation of a single acting cylinder, double acting cylinder by using pneumatic components, Electro Pneumatics: Operation of a Single Acting and Double Acting cylinder Operation of a Single Acting and Double Acting cylinder electro-pneumatically, Operation of a single acting cylinder- controlled from different positions using shuttle (OR) valve and Dual pressure (AND) Valve, Operation of a double acting cylinder using

quick exhaust valve and time delay valve, Controlling the speed of double acting cylinder using METERING IN valve and METERING OUT valve, Apply AND/ OR Logic using two manual controls for forward stroke of a double acting cylinder and using relay for actuation, Single cycle automation of multiple cylinders in sequence. Use of hydraulics for actuators.

## Department of Mechatronics Engineering Course Hand-out

Modern Control System | MC1655 | 3 Credits | 3 0 0 3

Session: Jan 19- May 19 | Faculty: Princy Randhawa | Class: Program Elective

**A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as a Program Elective. This course covers the design and analysis of sampled data systems and provides a theoretical basis for applying the methods of state space and multivariable systems design. It also develops an understanding of how interactions between and within loops can be handled by design.

#### **B.** COURSE OUTCOMES: At the end of the course, students will be able to

- [MC1655.1] Outline the basics of linear and nonlinear systems background with emphasis on state space techniques and writing the state space equation for electrical, mechanical and analogous systems.
- [MC1655.2] Interpret how the time response of linear time-invariant systems are linked to state space parameter and the connection between transfer function and state-space models. Understand the stability concept and its link to the transfer function pole locations and state space parameters.
- [MC1655.3] Describe about the extending state-space analysis and gains an appreciation of recent advances in control Engineering such as pole assignment, observers design, introduction to optimal, adaptive and Identification techniques.
- [MC1655.4] Analyse and learn why standard methods of analysis and design in linear systems are not applicable in Non-linear system. Methods suitable for nonlinear systems are introduced and their applications are Explored.
- [MC1655.5] Recall the fundamental concepts of Digital Control Systems and to understand the design of Digital Controllers.

#### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an Engineering specialization to the solution of complex engineering problems.
- [PO.2].Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching Substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3].Design/development of solutions: Design solutions for complex engineering problems and design system Components or processes\_that meet the specified needs with appropriate consideration for the public health and Safety, and the cultural, societal, and environmental considerations.
- [PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including Design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid Conclusions.
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the

Limitations.

- [PO.6].The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, Safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering Practice
- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the Engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- [PO.10].Communication: Communicate effectively on complex engineering activities with the engineering

  Community and with society at large, such as, being able to comprehend and write effective reports and design

  Documentation, make effective presentations, and give and receive clear instructions
- [PO.11] Project management and finance: Demonstrate knowledge and understanding of the engineering and Management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, Power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **D.** Assessment Rubrics:

Criteria	Description	Maximum Marks						
	Sessional Exam I (Closed Book)	15						
Internal Assessment	Sessional Exam II (Closed Book)	15						
(Summative)	In class Quizzes and Assignment on	30						
	MATLAB for designing any system							
End Term Exam	End Term Exam (Closed Book)	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is required to be maintained by a stude							
(Formative)	be qualified for taking up the End Semester examination. The allowance							
	25% includes all types of leaves include							
Make up Assignments	Students who misses a class will have	ve to report to the teacher about the						
(Formative)	absence. A makeup assignment on the	topic taught on the day of absence will						
	be given which has to be submitted w	ithin a week from the date of absence.						
	No extensions will be given on this. The	he attendance for that particular day of						
	absence will be marked blank, so the	hat the student is not accounted for						
		ed to a maximum of 5 throughout the						
	entire semester.							
Homework/ Home Assignment/	•							
Activity Assignment	these works are not graded with marks. However, a student is expected to							
(Formative)		nents with full zeal since the activity						
	·	will be assessed and marks will be						
	awarded.							

#### E. SYLLABUS:

Sampled Data Control Systems, Signal Reconstruction, sampling process, ZOH, mapping between s and z planes – pulse transfer functions – step response – stability analysis – Jury's stability test, Bilinear Transformation, Bode plot, Root Locus models for Discrete Time system, Diagonalization, State Transition Matrix, Solution of equation for discrete time system by recursion and z-transform method, Concepts of Controllability and Observability, pole placement by state feedback-Ackerman's Formula- State Observers, Properties of non-linear systems - common physical non-linearity - dead zone, relay, and saturation nonlinearities - phase plane method-singular points phase trajectories, Isocline Method, Liapunov's stability criterion.

## **MANIPAL UNIVERSITY JAIPUR**

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Programmable Logic Control | MC1606 | 3 Credits | 3 0 0 3

Session: Jan 19 – May 19 | Faculty: Anil Sharma | Class: Sixth Semester

JJ. Introduction: This course is offered by Dept. of Mechatronics Engineering as sixth semester subject, targeting students who wish to pursue research & development in industries or higher studies in field of Mechatronics Engineering, including Industrial Automation and control systems. Programmable Logic Controllers are now widely used throughout different types of industries. In this course students will learn about the basic principles of PLC control, different input devices (sensors and transducers), and typical output devices (actuators). Students will have hands on experience with different industrial processes. This course will provide the information required to make knowledgeable decisions about PLC applications in various manufacturing environments and industries. This course will allow for students to make well-informed decisions about existing control applications and to determine what is required for future applications.

**Course Outcomes:** At the end of the course, students will be able to

[MC1606.1] Identify different types of logical process used in industrial automation.

[MC1606.2] Understand and connect the different switches, sensors and actuators with PLC.

[MC1606.3] Classify and comprehend the working principle of various industrial processes such as traffic light control and bottle filling plant.

[MC1606.4] Understand the advance programming concepts of PLC.

[MC1606.5] Provide the information required to make knowledgeable decisions about PLC applications in various manufacturing environments and industries to enhance employability skills.

## KK. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.97].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.98]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.99]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.100]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.101]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.102]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health,</u> safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice

- [PO.103]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.104]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.105]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.106].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.107]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.108]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

## LL. Assessment Plan:

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Embedded System Design| MC 1654 | 3 Credits | 3 0 0 3

Session: Jan 19 – May 19 | Faculty: Kumar Gaurav | Class: Dep. Elective (VI Sem)

- **GGGG.** Introduction: This course is offered by Dept. of Mechatronics Engineering as a department elective, targeting students who wish to pursue research & development in industries or higher studies in field of embedded systems. It gives knowledge about design, implementation and analysis of embedded computer hardware and software. Next, the students will be exposed to the very important issue of designing for less power consumption and introduce them to the techniques that are adopted to this end. Since many of the embedded systems will have real time constraints, basic issues of real time operating systems will be discussed. This will be followed by formal specification models and languages, mapping the specification to hardware and software components along with decisions on design tradeoffs and hardware software partitioning.
- **HHHH.** Course Objectives: At the end of the course, students will be able to
- [1410.49]. To introduce students to the modern embedded systems and show how to understand and program such systems using a concrete platform built around.
- [1410.50]. To provide experience to integrate hardware and software for microcontroller applications systems to enhance employability skills.
- [1410.51]. Discuss the major components that constitute an embedded system.
- [1410.52]. Implement small programs to solve well defined problems on an embedded platform.
- [1410.53]. To know and understand the usage of Task Scheduling Policies.
- [1410.54]. To understand network protocols that can be used for inter device communications.

### **IIII. Program Outcomes and Program Specific Outcomes**

- [PO.109]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.110]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.111]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- [PO.112]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.113]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and IT</u> tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.114]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice

- [PO.115]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- [PO.116]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.117]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- [PO.118]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.119]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.120]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### MANIPAL UNIVERSITY JAIPUR

## School of Automobile Mechanical and Mechatronics Engineering

## Department of Mechatronics Engineering Course Hand-out

Production Technology | MC 1656 | 3 Credits | 3 0 0 3

Session: Jan-19 – June 19 | Faculty: Dr. Manish Rawat| Class: Programme Elective (VI Sem.)

- **A.** Introduction: This course is offered by Dept. of Mechatronics Engineering as programme elective. In this course the students study the fundamentals and advanced techniques related to advance manufacturing processes. In addition to the applied aspects of manufacturing processes, a sound analytical basis for some of the processes will be taught. This course builds a foundation of capability for the solution, analysis and synthesis of un-conventional machining and gear manufacturing problems.
- **B.** Course Objectives: At the end of the course, students will be able to
  - [1656.1] To understand the principle, mechanism of metal removal of various unconventional machining processes.
  - [1656.2] Assimilate the Gear manufacturing & finishing processes.
  - [1656.3] Understand the shaping procedures and compression principles of powders and plastic materials.
  - [1656.4] Recognize the different types of press operations and their contributions in the product development.
  - [1656.5] Select appropriate cutting tools, work holding devices and cutting parameters for the given work piece.
- **C.** Program Outcomes and Program Specific Outcomes
  - [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
  - [PO.2]. Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
  - [PO.3].Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
  - [PO.4].Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
  - [PO.5].Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
  - [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
  - [PO.7]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
  - [PO.8]. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices
  - [PO.9].Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings

[PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions

- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.12].Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- [PSO.1] Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **D.** Assessment Plan:

Criteria	Description	Maximum Marks					
	Sessional Exam I (Close Book)	15					
Internal Assessment	Sessional Exam II (Close Book)	15					
(Summative)	In class Quizzes and Assignments,	30					
	Activity feedbacks (Accumulated and						
	Averaged)						
End Term Exam	End Term Exam (Close Book)	40					
(Summative)							
	Total	100					
Attendance	A minimum of 75% Attendance is required to be maintained by a student to be						
(Formative)	qualified for taking up the End Semester of						
	includes all types of leaves including med						
Make up Assignments	Students who misses a class will have to a						
(Formative)		on the day of absence will be given which					
		he date of absence. No extensions will be					
		cular day of absence will be marked blank,					
		sence. These assignments are limited to a					
	maximum of 5 throughout the entire seme						
Homework/ Home Assignment/	There are situations where a student may						
Activity		as are not graded with marks. However, a					
Assignment	student is expected to participate and perform these assignments with full zeal since						
(Formative)	the activity/flipped classroom participation will be awarded.	on by a student will be assessed and marks					

### **E.** Syllabus:

Non-conventional Machining: EDM, IBM, ECM, ECG, CM, AJM, Wire cut EDM, USM, LBM, Gear and Thread Manufacturing: Different types of Threads manufacturing methods, and tools involved, Different gear forming and generating methods. Gears finishing processes. Powder Metallurgy: Production of metal powders, compaction and sintering. Polymers and Composites: Introduction to polymers and composites; plastic processing – injection, compression and blow molding, extrusion, calendaring and thermoforming; molding of composites. Press Tool: Classification of presses, Classification of dies, cutting actions in dies, clearance, Methods of reducing cutting forces, Minimum Diameter of Piercing Centre of Pressure, Blanking, Piercing, Drawing, Bending and Progressive Die design, scrap reduction, strip layout. Jigs and Fixtures: Differences between Jigs and Fixtures, Design principles, 3-2-1 location principle, Types of locators, Concept of work piece control, Geometric control, Dimensional control and Mechanical control, Jigs and fixtures for various machining operations.

## MANIPAL UNIVERSITY JAIPUR

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Electrical Drives and Machines Lab | MC 1631 | 1 Credits | 0 0 2 1

Session: Jan 19 - May 19 | Faculty: Ashok Kumar Kumawat | Class: B. Tech VI Sem

- **PPPP. Introduction:** This course is offered by Dept. of Mechatronics Engineering as a lab, targeting students who wish to pursue research& development in industries or higher studies in field of Mechatronics Engineering, including electrical drive control and power electronics. Offers hands-on experience on power converters and drive control.
- **QQQQ.** Course Outcomes: At the end of the course, students will be able to
- [1410.55]. Experiment and interpretation of load test on single phase and three phase induction motor.
- [1410.56]. Hands-on analysis of load test and speed control on DC motor.
- [1410.57]. Implementation of various type of converters such as AC to DC, AC to AC etc.
- [1410.58]. Implementation of speed control of electrical drives using microcontroller.

## RRRR. Program Outcomes and Program Specific Outcomes

- **[PO.1]. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. **Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or <u>processes</u> that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- [PO.4]. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u>

  <u>engineering and IT tools</u> including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings

- [PO.10]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills, and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- **[PSO.3].** Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Assessment Plan:**

Criteria	Description	Maximum Marks					
Internal Assessment (Summative)	Laboratory Sessions	60					
End Term Assesment (Summative)	Lab Exam Performance	40					
	Total	100					
Attendance (Formative)	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking up the Practical End Semester examination. The allowance of 25% includes all types of leaves including medical leaves.						
Make up Assignments (Formative)		have to report to the teacher about the performed as a makeup experiment in the poratory exam					
Laboratory Guidelines	Students are expected to maintain an observation book and a laboratory record notebook. The experimental data should be noted in the observation book on the day of performance and the same should be transferred to the record notebook before the next lab. No students are allowed to enter the lab without the observation book and record book and attendance will be marked absent						

### SSSS. Syllabus

Speed-torque characteristics, starting, speed control of AC Motors: Asynchronous motors: Induction Motors; and Synchronous Motors Electric Drives: Components of electric drives, Determination of motor power rating, Power Modulators: Use of power semiconductor switches: power diodes, SCR, power transistor, IGBT, MOSFETs; Power converters: ac to ac, ac to dc, dc to ac, dc to dc, Special Machines: Methods of applications of Stepper Motors, Brushless DC Motors.

- [PO.9]. Individual and team work: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
  - **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
  - [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
  - [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

**ZZZZ.** Assessment Plan:

Criteria	Description	Maximum Marks						
Internal Assessment	Laboratory Sessions	60						
(Summative)								
End Term Assesment	Lab Exam Performance	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is required to be maintained by a student to be							
(Formative)	qualified for taking up the Practical End Semester examination. The allowance of							
	25% includes all types of leaves including medical leaves.							
Make up Assignments	Students who misses a lab session will have to report to the teacher about the absence. The missed experiment can be performed as a makeup experiment in the next lab session or anytime before the laboratory exam							
(Formative)								
Laboratory Guidelines	notebook. The experimental data should be noted in the observation book on the data							
	of performance and the same should be transferred to the record noteboo							
	next lab. No students are allowed to enter the lab without the observation book and							
	record book and attendance will be marked absent							

#### AAAAA. Syllabus

Implementation of Basic Logic Gates – AND, OR, EXOR, NOT, Latching with ON and OFF priorities, SR and JK Flip Flops. Timer Operations – ON delay, OFF delay retentive and nonretentive timers, all possible combination like pulse timer, latching on delay etc. Counter operations – up counter, down counter, up-down counters, High speed counters, Developing programs for Arithmetic operations, Logical Operations, Comparison operations, Analog PLC operations – Accessing Analog inputs, Process

and control analog outputs, Conveyor control Systems, Stepper Motor Control, Traffic light Control, Lift Control, Mini project, Bottling Plant.

## Text Books:

- 1. F. D. Petruzella, Programmable Logic Controllers, McGraw-Hills Publications, 4 th edition, 2010.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Industrial Robotics | MC1607 | 4 Credits | 3 1 0 4

Session: Jan 19 – May 19 | Faculty: Nikhil Shrivas | Class: Departmental Core

**A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as a core course. This course is designed to give a clear understanding of the concepts underlying the industrial robotic design. Simple mathematical methods are preferred to design a mechanical kinematic and dynamic and programming of industrial robot.

**B. COURSE OUTCOMES:** At the end of the course, students will be able to

[MC 1607.1] To understand the basics of NC, CNC, and DNC and developing CNC codes for different machining operations to enhance employability skills.

[MC 1607.2] To understand the basics of Group Technology, Flexible Manufacturing Process and Computer Integrated Manufacturing and learn their areas of applications.

[MC 1607.3] To learn about Single Station Manned /Automated Workstations and analyse the performance of Single Station Automated Cells, Parts Storage Subsystem and Automatic Parts Transfer systems.

[MC 1607.4] To Analyse Automated Flow Line and to learn fundamentals of line balance.

[MC 1607.5] To understand Computerized Manufacturing Planning Systems and Computer aided Process planning.

### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

[PO.1].Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems

[PO.2].Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

[PO.3].Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

**[PO.4].Conduct investigations of complex problems**: Use research-based knowledge and research methods including <u>design of experiments</u>, <u>analysis and interpretation of data</u>, and synthesis of the information to provide valid conclusions

- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern</u> <u>engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations</u>
- [PO.6].The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess</u> societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering</u> solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings.
- **[PO.10].Communication**: <u>Communicate effectively</u> on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

### **D.** Assessment Rubrics:

Criteria	Description	Maximum Marks						
	Sessional Exam I (Closed Book)	15						
Internal Assessment	Sessional Exam II (Closed Book)	15						
(Summative)	Quizzes and Assignments	30						
End Term Exam	End Term Exam (Closed Book) 40							
(Summative)

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Intelligent Controller | MC 1704 | 4 Credits | 3 | 0 4

Session: July 18 – Dec 19 | Faculty: Shambo Roy Chowdhury | Class: Prog. Elective

- **RR.** Introduction: This course is offered by Dept. of Mechatronics Engineering as a core subject, targeting students who wish to pursue research & development in industries or higher studies in field of fuzzy logic, artificial neural network, and genetic algorithms. The course focuses on providing an introduction to the emerging area of intelligent control and optimization using a control-engineering approach. Students are expected to have background knowledge on intelligent controllers for a better learning.
- **SS.** Course Outcomes: At the end of the course, students will be able to
  - [1410.63]. Understand the inspiration behind and requirement of the intelligent control systems.
  - [1410.64]. Understand the intelligent control algorithms based on neural network, fuzzy logic and genetic algorithms.
  - [1410.65]. Comprehend the mathematical basis of various soft computing techniques and relate them for various control applications.
  - [1410.66]. Implement intelligent modelling and optimization of control systems with software tool such as MATLAB or Python.
  - [1410.67]. Proficient in developing intelligent systems through case studies and simulation examples.

#### TT. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.13]. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- [PO.14]. Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- [PO.15]. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **[PO.16].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- [PO.17]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **[PO.18].** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- [PO.19]. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

# Department of Mechatronics Engineering Course Hand-out

Mechatronics System Design | MC 1706 | 4 Credits | 3 I 0 4

Session: Jul 18 – Dec 19 | Faculty: Raja Rout | Class: CORE

- **A. Introduction:** This course is offered by Dept. of Mechatronics Engineering as the departmental core, targeting students who wish to pursue research & development, industrial application or higher studies in the field of Mechatronics Engineering, Control engineering or Robotics. This course provides an overview on design, control, verify and validate of a mechatronic system. Students are expected to have background knowledge on control system, basic electronics and digital circuits for a better understanding. Knowledge of ROS, MATLAB/SIMULINK and CAD tool is an added advantage.
- **B.** Course Objectives: At the end of the course, students will be able to

[ <b>1706.1</b> ] To develop, design	gn and validate mathematica	I model of a mechatronic system.
--------------------------------------	-----------------------------	----------------------------------

- [1706.2] Design control algorithms with limited sensor information. Further, they will also learn to design optimal control law for mechatronic systems
- [1706.3] Analyse the stability and design a nonlinear control algorithm for a derived mathematical model.
- [1706.4] Design and select appropriate electronic components as per the system requirement
- [1706.5] Refer datasheet for IC characteristics and interface electronic components with computational unit.
- [1706.6] Implement and validation of control algorithms using a simulation environment.
- [1706.7] Verify the developed algorithms using Robot Operating System (ROS)

#### C. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the impact of the professional engineering solutions in

- societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- [PSO.1] Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2] Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, Power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3] Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **D.** Assessment Plan:

Criteria	Description	Maximum Marks						
	Sessional Exam I (closed book)	15						
Internal Assessment	Sessional Exam II (closed book)	15						
(Summative)	In class Quizzes and Assignments, Activity feedbacks	30						
	(Accumulated and Averaged)							
End Term Exam	End Term Exam (closed book)	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is required to be maintained by a student to be qualified for taking							
(Formative)	up the End Semester examination. The allowance of 25% includes all types of leaves including							
	medical leaves.							
Make up Assignments	Students who misses a class will have to report to the	teacher about the absence. A makeup						
(Formative)	assignment on the topic taught on the day of absence will l	be given which has to be submitted within						
	a week from the date of absence. No extensions will be	C						
	particular day of absence will be marked blank, so that t	he student is not accounted for absence.						
	These assignments are limited to a maximum of :	5 throughout the entire semester.						
Homework/ Home	There are situations where a student may have to work in home, especially before a flipped							
Assignment/ Activity	classroom. Although these works are not graded with marks. However, a student is expected to							
Assignment	participate and perform these assignments with full zeal since the activity/ flipped classroom							
(Formative)	participation by a student will be assessed and marks will be awarded.							

#### E. Syllabus

Introduction: Mechatronics Design process, Design Parameters, Traditional and Mechatronics designs – Advanced approaches in Mechatronics, Industrial design, and ergonomics, safety. System Modelling: Introduction-model categories-fields of application-model development-model verification-model validation-model simulation-design of mixed systems-electro mechanics design-model transformation- domain-independent description forms-simulator coupling. Actuators: Characteristics and applications of the Mechanical, electrical, Hydraulic and pneumatic actuator, shape memory alloys and their limitations. Sensors and transducers for motion measurement. Control parameters and system objectives, Mechanical configurations, popular control system configurations. Design with linear slides, Motion control Algorithms: significance of feedforward and feedback control loops, shortfalls, Architecture of Intelligent Machines: System design Classification, Motion control aspects of Design. Human and Machine, Machine Interfacing devices and strategy, Machine Vision: Feature and Pattern Recognition methods, concepts of perception and cognition in decision making. Case study: case study 1 and case study 2.

## F. Lecture Plan:

Lect. No	Topics	Session Outcome	Mode of Delivery	Corresponding CO	Mode of Assessing the Outcome		
1	Introduction and Course Hand-out briefing	To acquaint and clear teachers expectations and understand student expectations	Lecture	NA	NA		
2	Introduction to Mechatronics	Brief introduction to mechatronics system design subject	mechatronics system Activity design subject				
3	Basics of Modelling	Review of physical principles for system modelling	Lecture	1706.1	Class Quiz Mid Term I End Term		
4, 5	Mathematical Modelling (System 1)	Derivation of mathematical model for system 1 using physical principles	Lecture	1706.1	Class Quiz Mid Term I End Term		
6, 7	Mathematical Modelling (System 2)	Derivation of mathematical model for system 2 using physical principles	Lecture	1706.1	Class Quiz Mid Term I End Term		
8, 9	Mechanical Design and Simulation	Learn to simulate mechanical system in a simulation environment	Lecture	1706.1	In Class Quiz		
10, 11	Linear System Analysis	Understanding of basic control theory: model reduction, transient analysis, errors, system types	Flipped Classes	1706.2	Class Quiz Mid Term I End Term		
12, 13	Root Locus and Frequency domain analysis	Revision and understanding of basic control theory: Root locus, bode plot, polar plot	Flipped Classes	1706.2	Class Quiz Mid Term I End Term		
14	TF based Control design	Design of P, PD and PID controllers for TF based system along with advanced TF based controllers	Lecture	1706.2	Class Quiz Mid Term I End Term		
15, 16	Basics of State-Space	Understanding of basic state space theory: model, controllability, observability	Flipped Classes	1706.2	Class Quiz Mid Term I End Term		
17, 18	Observer design	Designing a full-order observer and reduced order observer to compensate limited sensor information	Lecture	1706.2	Class Quiz Mid Term I End Term		
19, 20	Pole-placement & Ackerman's Formula	Pole-placement control design for a state space model	Lecture	1706.2	Class Quiz Mid Term I End Term		
21, 22	Linear Quadratic Regulator Design	Designing of an optimal gain control law for state space model. Also learn	Lecture	1706.2	Class Quiz Mid Term I End Term		

		Riccati equation, and inverse lemma.			
23	Nonlinear Stability Analysis	Understanding of stability for a nonlinear system: local stability, global stability, asymptotic stability, global stability etc.	Lecture	1706.3	Class Quiz Mid Term I End Term
24	Lyapunov Based Control Design	Designing a basic nonlinear control law based on Lyapunov objective function: backstepping controller	Lecture	1706.3	Class Quiz Mid Term I End Term
25, 26	Sensors and Transducer	Understanding of sensors and transducers: pressure sensor, piezo electric, capacitive, strain etc.	Flipped Classes	1706.4	Class Quiz End Term
27, 28	Signal Conditioning circuits	To design different conditioning circuits such as filtering, amplification, protection, linearization, isolation, resistance change	Lecture	1706.4	Class Quiz End Term
29, 30	Signal conditioning: ADC & DAC	Detailed study of signal conditioning circuits: ADC & DAC	Lecture	1706.4	Class Quiz End Term
31, 32	Signal conditioning: Operational Amplifiers	Detailed study of signal conditioning circuits: OPAMP	Lecture	1706.4	Class Quiz End Term
33, 34	Motor Drivers circuits and ICs	Learn various motor driver ICs and H-bridge circuits	Flipped Class	1706.4	Mid Term 1 End term
35	Introduction to communication protocols & actuation signals	To discuss about the communication protocol, pin configuration, timing diagram	Lecture	1706.5	Class Quiz End term
36	Communication protocol: UART, RS232 & TTL	To discuss about the communication protocol, pin configuration, timing diagram	Lecture & Flipped Class	1706.5	Class Quiz End term
37, 38	Communication protocol: I2C & SPI	To discuss about the communication protocol, pin configuration, timing diagram	Lecture	1706.5	Class Quiz End term
39	Study of IC characteristics from datasheet	Learn to refer datasheet of a component and understand its parameters	Lecture	1706.5	Class Quiz End term
40	Introduction to MATLAB for system simulation	Use of MATLAB environment for simulation of ODE equations and model simulation	Activity	1706.6	Home Assignment Class Quiz
41, 42	Solving ODE and control validation	Use of MATLAB environment for simulation of ODE equations and model simulation	Activity	1706.6	Home Assignment Class Quiz

43	Introduction to ROS	Basic understanding of ROS and its application	Activity	1706.7	Home Assignment Class Quiz
44, 45, 46	Tutorial on ROS	Understanding of ROS functions: publisher, subscriber, message, topic etc	Activity	1706.7	Home Assignment Class Quiz
47, 48	Implementation and validation of control algorithms in ROS	Implementation of developed control algorithms for the studied system 1 and system 2.	Activity	1706.7	Home Assignment Class Quiz
49	Graphical Visualization in ROS	Graphical visualization and analysis of both the systems i.e. system 1 and system 2.	Activity	1706.7	Home Assignment Class Quiz
50	Conclusion and Course Summarization	NA	NA		NA

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Micro Electro Mechanical Systems (MEMS)| MC1755 | 3 Credits | 3 0 0 3

Session: Aug 18 – Dec 18 | Faculty: Anil Sharma | Class: Departmental Elective

- YY. Introduction: The objective of this course is to make students to gain basic knowledge on overview of MEMS (Micro electro Mechanical System) and various fabrication techniques. This enables them to design, analysis, fabrication and testing the MEMS based components. And to introduce the students various opportunities in the emerging field of MEMS.
- **ZZ.** Course Outcomes: At the end of the course, students will be able to

[MC1755.1] Analyse the working principles of currently available micro sensors, actuators, motors, valves, pumps, and fluidics used in microsystems.

[MC1755.2] Apply different scaling laws that are used extensively in the conceptual design of micro devices and systems.

[MC1755.3] Analyse different materials available for MEMS based processes and select materials for various MEMS devices.

[MC1755.4] Assess various techniques used in micro-fabrication processes and applications. Students will be able to differentiate between the positive and negative consequences of certain processes that are pertinent to microsystems.

[MC1755.5] Evaluate a micromachining technique, such as bulk micromachining and/or surface micromachining for the fabrication of specific MEMS device considering its working principle.

#### AAA. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.121].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- **[PO.122].** Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **[PO.123].** Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.124].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.125].** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.126].** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- **[PO.127].** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

- [PO.128]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.129]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- [PO.130]. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.131]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- [PO.132]. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <a href="life-long learning">life-long learning</a> in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Artificial Intelligence MC 1756 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 18 | Faculty: Ashok Kumawat | Class: Program Elective

**H. Introduction:** This course is offered by Department of Mechatronics Engineering as a department elective, targeting students who wish to pursue research & development in industries or higher studies in field of Mechatronics Engineering, including robotics, intelligent controllers, soft computing etc. This course will provide a broad understanding of the basic techniques for building intelligent computer systems and an understanding of how Artificial Intelligence is applied to problems. Students are expected to have background knowledge on algorithms and programming for a better learning.

### I. Course Objectives:

- [1410.68]. Understand the fundamentals of Artificial Intelligence, intelligent agents and various AI search algorithms.
- [1410.69]. Apply knowledge representation, reasoning, and machine learning techniques to real-world problems and enhance employability skills.
- [1410.70]. Explain the role of logical agents and planning in AI
- [1410.71]. Apply ANN, uncertain knowledge and reasoning in AI.
- [1410.72]. Applications of AI (Natural Language Processing, Robotics etc.)

### J. Program Outcomes and Program Specific Outcomes

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development

- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- [PSO.1]. Apply\_the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### L. Syllabus

**Introduction** to AI and intelligent agents. Uninformed search, Heuristic search, stochastic search, adversarial search, game playing. **Machine Learning**: basic concepts, linear models, perceptrons, **neural networks**, naive Bayes, Decision trees, ensemble, logistic regression, and unsupervised learning. Constraint satisfaction problems, Markov decision processes, reinforcement learning. **Logical agents**, propositional logic and first order logic, planning, partial order planning, Bayesian Networks, natural language processing, **AI applications**.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Biomedical Instrumentation | MC1757 | 3 Credits | 3 0 0 3

Session: Aug 18 - Dec 18 | Faculty: Princy Randhawa | Class: Program Elective

**A. INTRODUCTION:** This course will cover various systems of the human physiology, signals of biological origin obtained from these systems, biosensors, transducers, bio electrodes used to acquire such signals, and amplifiers for measuring bio potentials. Electrical safety of medical devices; measurements of the blood pressure, blood flow, respiratory system, clinical laboratory equipment, medical imaging, and bioethics will also be discussed. The main objective of this course is to introduce student to basic biomedical engineering technology. As a result student can understand, design and evaluate systems and devices that can measure, test and/or acquire biological information from the human body.

#### **B.** COURSE OUTCOMES: At the end of the course, students will be able to

- [MC1757.1] Outline the basic knowledge about human anatomy and physiological system.
- [MC1757.2] Describe the origin of bio potential and explain the role of bio potential electrodes.
- [MC1757.3] Explain and contrast measurement principles for blood flow, Blood pressure and volume as well as Respiratory variables.
- [MC1757.4] Inspect common biomedical signals, Electrodes, Biomedical Recorders and it's distinguish Characteristic features and also identify common signal artefacts, their sources and formulate strategies for their suppression.: To enhance entrepreneur skill
- [MC1757.5] Identify, explain and judge patient safety issues related to biomedical instrumentation.
- [MC1757.6] Design and examine the common imaging and therapeutic equipment's in the medical field of study. To enhance employability skill

#### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **[PO.2].Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **[PO.3].Design/development of solutions**: Design solutions for complex engineering problems and <u>design system</u> <u>components or processes</u> that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations..

- **[PO.4].Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6].The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health,</u> safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal</u> <u>and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development.
- **[PO.8]. Ethics**: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings.
- **[PO.10].Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Assessment Rubrics:**

Criteria	Description	Maximum Marks		
	Sessional Exam I (Closed Book)	20		
<b>Internal Assessment</b>	Sessional Exam II (Closed Book)	20		
(Summative)	4. Review Paper	10		
	5. Research, Analyze	10		
	biomedical application and			
	simulate			
	6. Seminar	10		

End Term Exam	End Term Exam (Closed Book)	40				
(Summative)		. •				
(Somman (C)	Total	100				
Attendance	A minimum of 75% Attendance is required to be maintained by a student to					
(Formative)	be qualified for taking up the End Semester examination. The allowance of					
(= ====================================	25% includes all types of leaves including medical leaves.					
Make up Assignments	Students who misses a class will have to report to the teacher about the					
(Formative)	absence. A makeup assignment on the topic taught on the day of absence will					
, ,	be given which has to be submitted within a week from the date of absence.					
	No extensions will be given on this. The attendance for that particular day of					
	absence will be marked blank, so that the student is not accounted for					
	absence. These assignments are limited to a maximum of 5 throughout the					
	entire semester.					
Homework/ Home Assignment/	There are situations where a student may have to work in home. Although					
Activity Assignment	these works are not graded with marks. However, a student is expected to					
(Formative)	participate and perform these assignments with full zeal since the activity					
	classroom participation by a student will be assessed and marks will be					
	awarded.					

#### **SYLLABUS:**

Physiology and transducers—resting and action potential—nervous system: functional organisation of the nervous system—structure of nervous system, neurons components of biomedical system - transducers—selection criteria—electro—physiological measurements -bioelectric signals and electrodes—amplifiers: preamplifiers. ECG—EEG—EMG—lead systems and recording methods—typical waveforms. Non-electrical parameter measurements measurement of blood pressure—cardiac output—heart rate—heart sound pulmonary function measurements—, biomedical recorders blood gas analysers: ph of blood—measurement of blood pco2, po2, ESR, GSR measurements, blood cell counters. Medical imaging—cat techniques—MRI—ultrasonography—endoscopy—thermography—different types of biotelemetry systems and patient monitoring assisting and therapeutic Equipments—cardiac pacemakers—defibrillators—ventilators—diathermy—heart—lung machine—dialysers, CASESTUDY-Study and Analysis of EMG Signals using LABVIEW

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Robotic Path Planning and Control | MC 1758 | 3 Credits | 3 0 0 3

Session: Jul 18 – Dec 18 | Faculty: Raja Rout | Class: Prog. Elective

- **P. Introduction:** This course is offered by Dept. of Mechatronics Engineering as the program elective, targeting students who wish to pursue research & development, industrial application or higher studies in the field of Mechatronics Engineering, Control engineering or Robotics. This course provides an overview on designing an autonomous wheeled mobile robot also discusses various path planning algorithms. Students are expected to have background knowledge on control system, basic electronics and digital circuits for a better understanding. Knowledge of ROS, MATLAB/SIMULINK is an added advantage.
- **Q.** Course Objectives: At the end of the course, students will be able to

[1706.8]	Identify suitable locomotion required as per the objectives.
[1706.9]	Derive, simulate and verify kinematics and dynamics equation of a mobile robot
[1706.10]	Choose suitable sensors for measuring position, velocities and for avoiding obstacles
[1706.11]	Design Lyapunov based control design and study its stability analysis
[1706.12]	Implement and simulate various path planning approaches applicable for wheeled mobile robot
[1706.13]	Verify the developed algorithms using Robot Operating System (ROS)

#### R. Program Outcomes and Program Specific Outcomes

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- [PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and <u>modern</u> engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health</u>, <u>safety</u>, <u>legal</u>, <u>and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- [PO.7]. Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the

engineering practices

- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> <u>teams</u>, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- [PSO.1] Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- [PSO.2] Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, Power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3] Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

# Department of Mechatronics Engineering Course Hand-out

Computer Networking & Communications Protocol MC 1759 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 18 | Faculty: Prabhat Ranjan | Class: Open Elective

- HHH. Introduction: Introduction to networks and digital communications with a focus on Internet protocols: Application layer architectures (client/server, peer-to-peer) and protocols (HTTP-web, SMTP-mail, etc.), Transport layer operation: (reliable transport, congestion and flow control, TCP); Network layer operation (routing, addressing, IPv4 and IPv6), Data Link layer operation (error detection/correction, access control, Ethernet, 802.11, PPP), Layer 2/3 protocols (ATM and MPLS); selected current topics such as: security, multimedia protocols, Quality of Service, mobility, wireless networking, emerging protocols.
- **III.** Course Outcomes: At the end of the course, students will be able to
  - [1759.1] Explain the way protocols currently in use in the internet work and the requirements for designing network protocols.
  - [1759.2] Capture and analyse network traffic.
  - [1759.3] Apply the theory of basic network performance analysis.
  - [1759.4] Analyse the current architecture of the internet and the entities involved with the day to day running of the internet and the process involved with development of policy and new protocols.
  - [1759.5] Explain and identify security and ethical issues in computer networking.

#### JJJ. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1]. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- **[PO.2]. Problem analysis**: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4]. Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6]. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice

- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices.
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- **[PO.10]. Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### KKK. Assessment Plan:

Criteria	Description	Maximum Marks					
	Sessional Exam I (Closed Book)	15					
Internal Assessment	Sessional Exam II (Closed Book)	15					
(Summative)	In class Quizzes and Assignments,	30					
	Activity feedbacks (Accumulated and						
	Averaged)						
End Term Exam	End Term Exam (Closed Book)	40					
(Summative)							
	Total	100					
Attendance		ired to be maintained by a student to be					
(Formative)	qualified for taking up the End Semest						
	includes all types of leaves including med						
Make up Assignments		se of medical issues will have to report to					
(Formative)		up assignment on the topic taught on the					
		be submitted within a week from the date					
	of absence. There will be no attendance p						
Homework/ Home Assignment/	There are situations where a student may have to work in home, especially before a						
Activity Assignment	flipped classroom. Although these works are not graded with marks. However, a						
(Formative)	student is expected to participate and perform these assignments with full zeal since						
	the activity/ flipped classroom participation by a student will be assessed and marks						
	will be awarded.						

#### LLL. SYLLABUS

Introduction to reference models, data communication, network architecture, basics of OSI, and TCP/IP reference models. Transmission media, FDM, TDM and CDMA, Frame relay and ATM switching, ISDN, Local area network protocols, IEEE standards for LAN. Data link layer design, functions and protocols, link layer, error detection and correction techniques, Ethernet, hubs and switches, PPP, Network layer, Transport layer: connectionless transport-UDP, FTP, Electronic Mall in the internet, P2P file sharing, HTTP, quality of services: ATM Differentiated service model, flow identification, scheduling, factors affecting QOS parameters and service categories, network management, protocol, SNMP, CMIP, concept of traffic and service. Voice and video data, ATM Traffic, Traffic contracting.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Computer Networking & Communications Protocol MC 1759 | 3 Credits | 3 0 0 3

Session: July 18 – Dec 18 | Faculty: Prabhat Ranjan | Class: Open Elective

- NNN. Introduction: Introduction to networks and digital communications with a focus on Internet protocols: Application layer architectures (client/server, peer-to-peer) and protocols (HTTP-web, SMTP-mail, etc.), Transport layer operation: (reliable transport, congestion and flow control, TCP); Network layer operation (routing, addressing, IPv4 and IPv6), Data Link layer operation (error detection/correction, access control, Ethernet, 802.11, PPP), Layer 2/3 protocols (ATM and MPLS); selected current topics such as: security, multimedia protocols, Quality of Service, mobility, wireless networking, emerging protocols.
- **OOO.** Course Outcomes: At the end of the course, students will be able to
  - [1759.1] Explain the way protocols currently in use in the internet work and the requirements for designing network protocols.
  - [1759.2] Capture and analyse network traffic.
  - [1759.3] Apply the theory of basic network performance analysis.
  - [1759.4] Analyse the current architecture of the internet and the entities involved with the day to day running of the internet and the process involved with development of policy and new protocols.
  - [1759.5] Explain and identify security and ethical issues in computer networking.

#### PPP. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1]. Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- **[PO.2]. Problem analysis**: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4]. Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.6]. The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice

- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices.
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- **[PO.10]. Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- [PO.11]. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Production and Operation Management | MC 1761 | 3 Credits | 3 0 0 3

Session: July 18 – May 19 | Faculty: Dr. Manish Rawat | Class: Program Elective

- **W. Introduction:** Operations Management is the systematic approach and control of the processes that transform inputs (e.g. human resources, facilities, materials, Information systems etc.) into finished goods and services. The operations function consists of the core wealth creation processes of a business and helps an organization to efficiently achieve its mission while constantly increasing productivity and quality. This course focuses on the role of operations management as a strategic element of the total organization. We will cover classic and up-to-date tools and concepts used to support operational managerial decisions.
- X. Course Objectives: At the end of the course, students will be able to
  - [1761.1] To gain some ability to recognize use of certain quantitative methods to assist in decision making on operations management and strategy.
  - [1761.2] To acquire a working understanding of the roles/functions of production management in the context of business enterprise.
  - [1761.3] To develop skills in solving production and operation management problems;
  - [1761.4] To recognize, appreciate, and perform the job of a competent production or operation manager.
  - [1761.5] To understand the managerial responsibility for Operations, even when production is outsourced.

#### Y. Program Outcomes and Program Specific Outcomes

- **[PO.1].** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- **[PO.2]. Problem analysis**: <u>Identify, formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **[PO.3]. Design/development of solutions**: Design solutions for complex engineering problems and <u>design</u> system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering</u> and <u>IT tools</u> including prediction and modeling to complex engineering activities with an understanding of the limitations
- **[PO.6].** The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, <u>health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice

- **[PO.7].** Environment and sustainability: Understand the <u>impact of the professional engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse</u> teams, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- [PSO.1]. Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, and strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **Z.** Assessment Rubrics:

Criteria	Description	Maximum Marks					
	Sessional Exam I (Close Book)	15

(Summative)	In class Quizzes and Assignments,	30					
	Activity feedbacks (Accumulated and						
	Averaged)						
End Term Exam	End Term Exam (Close Book)	40					
(Summative)							
	Total	100					
Attendance	A minimum of 75% Attendance is required to be maintained by a student to be						
(Formative)	qualified for taking up the End Semester examination. The allowance of 25%						
	includes all types of leaves including med						
Make up Assignments		report to the teacher about the absence. A					
(Formative)		n the day of absence will be given which					
		he date of absence. No extensions will be					
	given on this. The attendance for that parti						
		sence. These assignments are limited to a					
	maximum of 5 throughout the entire semester.						
Homework/ Home Assignment/	There are situations where a student may have to work in home, especially before a						
Activity Assignment	flipped classroom. Although these works						
(Formative)	student is expected to participate and perfe	orm these assignments with full zeal since					

the activity/ flipped classroom participation by a student will be assessed and marks will be awarded.

#### AA. Syllabus

Forecasting: Importance and uses of forecasting, Type of forecasts, Correlation analysis and Seasonality, Forecast control. Product Development and Design: Factors affecting product development and design, Standardization, Capacity Planning: Factors affecting system capacity, Aggregate Planning: Pure and mixed strategies of aggregate planning, Material Requirement Planning: Product structure tree, Bill of Material. Machine Scheduling: Factors affecting job shop scheduling, Different priority sequencing rules, Determination of mean flow time, average job lateness and average number of jobs in the system, Line balancing, Inventory Control: Economic order quantity, Different inventory control models, Effect of quantity discount, Quality Control: Meaning of Quality, Quality assurance system, Inspection and control of quality; Process control charts, Acceptance sampling, Concept of Six Sigma. Reliability and Maintenance Planning: Constant failure rate and Time-dependent failure rate models for system components; System reliability determination; Types of maintenance. Queuing Model: Introduction, Markov Chains and Markov Processes, Birth-Death Processes, Simple Queueing Models M/M/-/- Queues.

### COMPUTER INTIGRATED MANUFACTURING | MC1707 | 3 Credits | 3 0 0 3

Session: July 18 – Nov 18 | Faculty: Varun. J | Class: Departmental Core

**A. INTRODUCTION:** This course is offered by Dept. of Mechatronics Engineering as a core course. This course is designed to give a clear understanding of the concepts underlying the industrial robotic design. Simple mathematical methods are preferred to design a mechanical kinematic and dynamic and programming of industrial robot.

**B.** COURSE OUTCOMES: At the end of the course, students will be able to

[MC 1707.1] To understand the basics of NC, CNC, and DNC and Understanding CNC codes for different machining operations thereby making students employable in automated manufacturing systems

[MC 1707.2] To understand the basics of Group Technology, Flexible Manufacturing Process and Computer Integrated Manufacturing and learn their areas of applications.

[MC 1707.3] To learn about Single Station Manned /Automated Workstations and analyse the performance of Single Station Automated Cells, Parts Storage Subsystem and Automatic Parts Transfer systems and thus improving skills in automation systems.

[MC 1707.4] To Analyse Automated Flow Line and to learn fundamentals of line balance.

[MC 1707.5] To understand Computerized Manufacturing Planning Systems and Computer aided Process planning.

#### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

**[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems

[PO.2].Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

**[PO.3].Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

**[PO.4].Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions

- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6].The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7]. Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8]. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **[PO.10].Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### **D.** Assessment Rubrics:

Criteria	Description	Maximum Marks						
	Sessional Exam I (Closed Book)	15						
Internal Assessment	Sessional Exam II (Closed Book)	15						
(Summative)	Quizzes and Assignments	30						
End Term Exam	End Term Exam (Closed Book)	40						
(Summative)								
	Total	100						
Attendance	A minimum of 75% Attendance is required to be maintained by a							
(Formative)	student to be qualified for taking up the End Semester examination.							
	The allowance of 25% includes all types of leaves including medical							
	leaves.							
Make up Assignments	ke up Assignments   Students who misses a class will have to report to the teacher							
(Formative)	the absence. A makeup assignment on the topic taught on the							
	absence will be given which has to be submitted within a we							
the date of absence. No extensions will be given on								
	attendance for that particular day of absence will be marked blank, so							
	that the student is not accounted for absence. These assignments are							
limited to a maximum of 5 throughout the entire semester.								
Homework/ Home	There are situations where a student may have to work in home.							
Assignment/ Activity	Although these works are not graded with marks. However, a student							
Assignment	is expected to participate and perform these assignments with full zeal							
(Formative)	since the activity classroom participation by a student will be assessed							
	and marks will be awarded.							

#### E. SYLLABUS:

Development in Machine Tools, Components of NC Machine, Problem with conventional NC, CNC Machine, CNC programming: Co-ordinate systems, Manual data input, Distributed Numerical Control, Adaptive Control Machining System, Group Technology, FMS and CIM: Part families – Part classification and coding, production flow analysis, Computer Integrated Manufacturing System, Automated Storage/Retrieval Systems, Flexible Manufacturing System, Single Station Manned /Automated Workstations: Single Station Automated Cells, Parts Storage Subsystem and Automatic Parts Transfer. Analysis of Automated Flow Line & Line Balancing: General terminology and analysis, Analysis of Transfer Line Manual Assembly lines, line balancing problem. Computerized Manufacturing Planning Systems: Computer aided Process planning, Computer integrated planning systems, factory data collection systems, automatic identification systems.

Virtual Instrumentation | MC1762 | 3 Credits | 3 0 0 3

Session: Aug 18 – Dec 18 | Faculty: Princy Randhawa | Class: Program Elective

- **A. INTRODUCTION:** The objective of this course is to introduce the concept of virtual instrumentation and to develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control.
- **B. COURSE OUTCOMES:** At the end of the course, students will be able to
  - [MC1762.1] To Describe about virtual instrumentation and introduce about VI tool sets.
- [MC1762.2] To demonstrate the working of Lab VIEWs and learn its basic programming concepts: To enhance enterprenuer skills
  - [MC1762.3] To get introduced to VI programming techniques.
- [MC1762.4] To Describe Data Acquisition System Components- To enhance employability skills
- [MC1762.5] Acquaint students about the applications of Virtual instrumentation

#### C. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- **[PO.1].Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- [PO.2].Problem analysis: <u>Identify</u>, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- [PO.3].Design/development of solutions: Design solutions for complex engineering problems and <u>design system</u> components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations..
- **[PO.4].Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **[PO.5]. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and <u>modern engineering and</u> IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- [PO.6].The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal</u>, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

- **[PO.7]. Environment and sustainability**: Understand the <u>impact of the professional engineering solutions in societal</u> and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- [PO.8]. Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9]. Individual and team work**: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings.
- **[PO.10].Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **[PO.11] Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [**PSO.3**]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

(Formative)	absence. A makeup assignment on the	absence. A makeup assignment on the topic taught on the day of absence will						
	be given which has to be submitted w	be given which has to be submitted within a week from the date of absence.						
	No extensions will be given on this. T	he attendance for that particular day of						

	absence will be marked blank, so that the student is not accounted for absence. These assignments are limited to a maximum of 5 throughout the entire semester.
Homework/ Home Assignment/ Activity Assignment (Formative)	There are situations where a student may have to work in home. Although these works are not graded with marks. However, a student is expected to participate and perform these assignments with full zeal since the activity classroom participation by a student will be assessed and marks will be awarded.

#### **SYLLABUS:**

Basics of Virtual Instrumentation-Historical Perspective, Need/Advantages of VI, Defining VI, Block Diagram & Architecture of VI, Data flow techniques, Graphical Programming, Comparison with Conventional Programming. VI Programming Techniques-VIs and SUBVIs, Loops and Charts, Arrays, Clusters, Graphs, Case/Sequence Structures, Formula nodes, Local & Global Variables, Strings & File Input. Data Acquisition Basics with VI-ADC/DAC, DI/O, Counters/Timers, PC Hardware Structures, and Timing interrupts, DMA, Software & Hardware Installations. Use of Analysis Tool-Fourier Transform, Power Spectrum, Correlation Methods, Fourier transform – Power spectrum – Correlation – Windowing and filtering tools – Simple temperature indicator – ON/OFF controller – PID controller – CRO emulation – Simulation of a simple second order system, CASESTUDY using LABVIEW based projects.

School of Automobile, Mechanical and Mechatronics

# Department of Mechatronics Engineering Course Hand-out

CIM & automation Lab| MC1733 | 1 Credits | 0 0 2 1

Session: 2018-2019 | B.Tech. VII Semester

- **A. Introduction:** Due to the rapid advances in technology, all industrial processing systems, factories, machinery, test facilities, etc. turned from mechanization to automation. A mechanization system needs human intervention to operate the manual operated machinery. As new and efficient control technologies evolved, automation control is being driven by the need for high accuracy, quality, precision and performance of industrial processes. Automation is a step beyond the mechanization which makes use of high control capability devices for efficient manufacturing or production processes.
- B. Course Outcomes: At the end of the course, students will be able to

[MC1733.1] Recognize different circuit designing techniques and judge the best way to achieve the output with circuit for a particular condition of automation

[MC1733.2] Recall different automated motion for different types of applications, choose and test various valves for the circuit developed to imitate actual motion required for automation thus increasing entrepreneurship skills.

[MC1733.3] Experiment using different valves for circuit, analyses the circuit and correlate with working of valves.

[MC1733.4] Modify the circuit using different valves and PLC to control the final actuator motion using electrical controls used in industrial scenario thus enhancing employability skills.

# C. Program Outcomes and Program Specific Outcomes

- [PO.1]. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems
- [PO.2]. Problem analysis: <u>Identify</u>, <u>formulate</u>, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- [PO.3]. Design/development of solutions: Design solutions for complex engineering problems and <u>design system components or processes</u> that meet the specified needs with appropriate consideration for the public health\_and safety, and the cultural, societal, and environmental considerations
- **[PO.4].** Conduct investigations of complex problems: Use research-based knowledge and research

methods including <u>design of experiments</u>, <u>analysis and interpretation of data</u>, and synthesis of the information to provide valid conclusions

[PO.5]. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern

<u>engineering</u> and <u>IT tools</u> including prediction and modeling to complex engineering activities with an understanding of the limitations

- **[PO.6].** The engineer and society: Apply reasoning informed by the <u>contextual knowledge to assess societal, health, safety, legal, and cultural issues</u> and the consequent responsibilities relevant to the professional engineering practice
- **[PO.7].** Environment and sustainability: Understand the <u>impact of the professional</u> <u>engineering solutions in societal and environmental contexts</u>, and demonstrate the knowledge of, and need for sustainable development
- **[PO.8].** Ethics: Apply ethical principles and commit to <u>professional ethics</u> and responsibilities and norms of the engineering practices
- **[PO.9].** Individual and team work: Function effectively as an individual, and as a <u>member or leader in diverse teams</u>, and in multidisciplinary settings
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- **[PO.11].** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- **[PO.12].** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and <u>life-long learning</u> in the broadest context of technological change
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills and modern computing tools to design, perform and analyze experiments to meet desired goals within the given constraints.
- **[PSO.2].** Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems.
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems.

#### D. Assessment Plan:

Criteria	Description	Maximum Marks			
Internal Assessment (Summative)	Laboratory Sessions	60			
End Term Assessment (Summative)	Lab Exam Performance	40			
	Total	100			
Attendance (Formative)	to be qualified for taking up the	is required to be maintained by a student Practical End Semester examination. The ppes of leaves including medical leaves.			
Make up Assignments (Formative)	Students who misses a lab session will have to report to the teacher about the absence. The missed experiment can be performed as a makeup experiment in the next lab session or anytime before the laboratory exam				
Laboratory Guidelines	record notebook. The experimen book on the day of performance record notebook before the next	ain an observation book and a laboratory tal data should be noted in the observation and the same should be transferred to the lab. No students are allowed to enter the k and record book and attendance will be			

#### E. SYLLABUS

Pneumatics: Single cycle automation of multiple cylinders using cascading method; Intermediated positioning of a double acting cylinder; Use of pneumatic counter; Use of pressure sequence valve; Use of back pressure valve; Use of pneumatic PLC for automation for single and multiple cycle; Application of AND/ OR Logic; Electro-pneumatics AND/ OR logic; single cycle automation using relay; ON and OFF delay timer application for solenoid actuation; Use of double solenoid valve with capacitive sensors (Use plastic or metal cam for sensing); Use of double solenoid valve and electrical limit switch. Use of PLC for multi-cycle and sequential operation of actuators.

#### **Text Books:**

- 1. Pneumatics Systems: By S. R Majumdar
- 2. Industrial Automation & robotics :By A. K Gupta & S. K. arora

#### **Reference Books:**

- 3. Advance Level Text book: Janatics
- 4. Advance Level Work book: Janatics
- 5. Waller D. and Werner H., Pneumatics Workbook Basic Level, Festo Didactic GMBH & Co, Germany, 1993.

# **DD. Lecture Plan:**

Lab No	Name of the Experiment	<b>Experiment Outcome</b>	Type of Expt	Corresponding CO	Mode of Assessing the Outcome
1.	<b>Experiment 1:</b> Application of cascading method for single cycle automation of multiple cylinders using (Sequence of motion :A+B+B-A-).	To acquaint the students with pneumatic circuit designing techniques.	Live Demo	1733.1 1733.2	Verification/Implementation of circuit, Viva-Voce
2	<b>Experiment 2:</b> Use of spring centered pilot operated valve for manual intermediated positioning of a double acting cylinder in forward stroke and automatic retraction in return stroke	To acquaint the students with locking of cylinder in a position	Live Demo/Hands ON	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce
3	<b>Experiment 3:</b> Application of pneumatic counter for counting number of cycles of a cylinder.	To acquaint with usage of counters in mass production	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce
4	<b>Experiment 4:</b> Demonstration of a pressure sequence valve for single cycle automation of a double acting cylinder	To acquaint with sequential operation automation in industries	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce
5	<b>Experiment 5:</b> Use of back pressure valve for single cycle automation of a double acting cylinder	To acquaint with sequential automation using back pressure valve.	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce
6	<b>Experiment 6:</b> Use of pneumatic PLC for single cycle automation of multiple cylinders (Sequence of motion A+B+A-B-)	To acquaint with the usage of pneumatic PLC	Hands On	1733.2 1733.3 1733.1	Verification/Implementation of circuit, Viva-Voce
7	<b>Experiment 7:</b> Use of pneumatic PLC for multi cycle automation of multiple cylinders (Sequence of motion A+B+A-B-)	To acquaint with the use of pneumatic PLC for automation	Hands On	1733.2 1733.3 1733.1	Verification/Implementation of circuit, Viva-Voce
8	<b>Experiment 8:</b> Application of AND/OR Logic using two manual controls for forward stroke of a double acting cylinder and using relay for actuation.	To acquaint with automation through specific valves	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce

9	<b>Experiment 9:</b> Demonstration of electropneumatic operation of two double acting cylinders in sequence A+B+B-A-	To acquaint Electro pneumatic automation	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce	f
10	<b>Experiment 10:</b> Verifying the use of On and OFF delay timer in operation of a double acting cylinder using double solenoid valve for single cycle.	To acquaint with techniques for designing of pneumatic circuits and its automation through specific valves	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce	ì
11	<b>Experiment 11:</b> Use of capacitive sensors for operation of a double acting cylinder using double solenoid valve	To acquaint with automation circuit based on sensors	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce	f
12	<b>Experiment 12:</b> Use of electric limit switch for multi cycle operation of a double acting cylinder using double solenoid valve	To acquaint with automation using electrical limit switch	Hands On	1733.2 1733.3	Verification/Implementation of circuit, Viva-Voce	
13	<b>Experiment 13:</b> Use of PLC for multicycle operation of a double acting cylinder	To understand the PLC for pneumatic circuit automation	Hands On	1733.3 1733.4	Verification/Implementation of circuit, Viva-Voce	1
14	<b>Experiment 14:</b> Use of PLC for operation of a two cylinders in sequence A+A-B+B-	To understand the PLC for pneumatic circuit automation	Hands On	1733.3 1733.4	Verification/Implementation of circuit, Viva-Voce	Î

School of Automobile Mechanical and Mechatronics Engineering

# Department of Mechatronics Engineering Course Hand-out

Industrial Training | MC 1781 | 3 Credits | 0 0 1 0

Session: July -Nov 18 | Faculty: Dr. Ajay Kumar/Varun Jurwall | Class: VIIth Semester

- **TTT. Introduction:** This course is offered by Dept. of Mechatronics Engineering, industrial training is a very important programme since it complements both the academic and professional aspects of the engineering education though it takes only about 6-8 weeks period of training. Exposing the students to the practical experience and actual working environment shall open the avenues for developing their skills and capabilities, as well as enhancing their intellectual and emotional Persona. Students are expected to have background knowledge on basic engineering problems, fundamental mechanical course for a better learning.
- **UUU.** Course Outcomes: At the end of the course, students will be able to
  - [ME 1781.1] Demonstrate competency in relevant engineering fields through problem identification, formulation and solution
  - [ME 1781.2] Develop the ability to work as an individual and in group with the capacity to be a leader or manager as well as an effective team member
  - [ME 1781.3] Increase in employability by working at industrial project
  - [ME 1781.4] Master the professional and ethical responsibilities of an engineer

#### VVV. PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

- [PO.1] Engineering Knowledge: Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- [PO.2] Problem Analysis: Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- [PO.3] Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- [PO.4] Conduct investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.

[PO.5] Modern Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an under- standing of the limitations.

[PO.6] The Engineer and Society: Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.

[PO.7] Environment and Sustainability: Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.

[PO.8] Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.

[PO.9] Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.

[PO.10] Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.

[PO.11] Project Management and Finance: Demonstrate knowledge and understanding of engineering and management principles and apply these to owners own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

[PO.12] Life-long Learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### **Programme Specific Outcomes:**

PSO13: Show an awareness of contemporary issues.

PSO14: Participate and succeed in competitive examinations.

#### **WWW.Assessment Plan:**

Criteria	Description	Maximum Marks								
End Term Exam	End Term Exam (presentation and	100								
(Summative)	report submission)	(Knowledge-20,								
		Presentation-30, Report-30,								
		Ans. Of query- 20)								
	Total	100								
Attendance	A minimum of 75% Attendance is re	equired to be maintained by a								
(Formative)	student to be qualified for taking up t	he End Semester examination.								
	The allowance of 25% includes all types of leaves including medical									
	leaves.	_								

Make up Assignments	Students who misses a class will have to report to the teacher about
(Formative)	the absence.

#### XXX. SYLLABUS

Each student has to give presentation on industrial training. The presentation time is a minimum of 30 minutes followed by a 10 minutes' session for discussion/ question & answers; Each student has to submit to the department a Project report at least three days before the day of seminar; Each student has to make the presentation with LCD projector

Course Hand-out
Major Project | Code: MC-1881 | 12 Credits | 0 0 0 12

Session: Jan. 19 – May 19 | Faculty: Ms. Princy Randhawa | Class: VIII Semester

#### A. Introduction:

This course is offered by Dept. of Mechatronics Engineering as a final year project, represents the culmination of study towards the Bachelor of Engineering degree in Mechatronics Engineering. Projects offer the opportunity to apply and extend material learned throughout the program assessment is by means of a midterm presentation, submission of thesis and public demonstration of work undertaken.

**B.** Course Outcomes: At the end of the course, students will be able to[MC1881.1]. Demonstrate a sound technical skill and knowledge of Mechatronics Engineering for better employability.

[MC1881.2]. Plan, analyze, design and implement a hardware/simulation-based project and gather knowledge over the field of research and design about the proposed work.

[MC1881.3]. Demonstrate knowledge of contemporary issues in their chosen field of research.

[MC1881.4]. Communicate with engineers and the community at large in written and oral forms.

# **Program Outcomes and Program Specific Outcomes**

- **[PO.1]. Engineering Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- [PO.2]. **Problem Analysis:** Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- [PO.3]. Design/ Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- **[PO.4].** Conduct investigations of complex problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
- [PO.5]. Modern Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an under- standing of the limitations.
- [PO.6]. The Engineer and Society: Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.
- **[PO.7]. Environment and Sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and

- need for sustainable development.
- **[PO.8]. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
- **[PO.9]. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
- **[PO.10].** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
- **[PO.11]. Project Management and Finance:** Demonstrate knowledge and understanding of engineering and management principles and apply these to owners own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **[PO.12]. Life-long Learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- **[PSO.1].** Apply the knowledge of basic sciences, analytical skills, and modern computing tools to design, perform and analyse experiments to meet desired goals within the given constraints.
- [PSO.2]. Apply concepts of circuit analysis, analog and digital electronics, controls, electric drives, instrumentation, power systems, machine learning and artificial intelligence to design and automation of mechatronics systems
- [PSO.3]. Use the principles of solid mechanics, fluid mechanics, and strength of materials, advanced functional materials and manufacturing processes to design, manufacture, and commissioning of mechatronics systems
