2. Statistics Guide → t-TESTS → One Sample t-Test

One Sample t-Test

One Sample t-Test is carried out to test the hypothesis whether sample mean adheres with the population mean (or any other constant) often referred to as Test value. The null hypothesis considered in this case is that there is no significant difference between the sample mean and the Test value. The One Sample t-Test statistic is given by the formula:

$$t = \frac{\bar{x} - \mu}{s_{\bar{x}}}$$

where

$$s_{\bar{x}} = \frac{s}{\sqrt{n}}$$

$s_{\bar{x}}$ is the estimated standard error of the mean

For application of One Sample t-test, see [One Sample t-test](#) in the Analysis sub-section of Application Interface.
